

Little Jess™

Dianella caerulea 'DCMP01' 

Tough dwarf, compact and very low maintenance.

'Little Jess' only grows to about half the height of many forms of *Dianella caerulea*; about 40cm high (high nutrition can make it higher). It is a great commercial and domestic plant. It has excellent humidity tolerance, and good cold tolerance.

Small enough for line of sight, big enough to work

Dianella caerulea is known as one of the most drought tolerant, hardy Flax Lilies. Underground rhizomes ensure excellent cold survival. 'Little Jess' has very short, compact canes and it will not fall over like common *Dianella caerulea* which generally have long canes. An estimated trimming once every 8 years, makes this about the lowest maintenance plant there is. It's the best low growing erosion control plant but may discolour in very cold climates like Canberra.

Lowest maintenance plant

DESCRIPTION Dwarf, compact, clumping *Dianella caerulea*
HEIGHT & WIDTH 40cm x 40cm
POSITION Full sun and moderate to heavy shade
CARE Water as required for 8-13 weeks until established
USES Ideal for mass plantings or specimen planting in beds
SOIL TYPE Tolerates a wide variety of soil types
