

# ENVIRONMENTAL PAVERS & RETAINING WALL BLOCKS

Reduced  
carbon footprint

The major part of **Timbercrete** is wood waste, so carbon is locked away for decades. Cooler surrounds, lower heat island effect and cooler under feet on a hot day.

Natural looking... easier to cut

Dry stack interlocking or regular retaining wall blocks.

Timbercrete allows for 600mm x 600mm pavers. Other products are generally too heavy in this size.

Less than half the weight - Reduced transport costs and emissions, and easier on the back to lay, yet **Timbercrete** is wear resistant similar to sandstone.
