

Little Jess™

Dianella caerulea 'DCMP01' (b)

STRAPPY LEAF PLANTS

The Little Jess™ plant is the biggest selling, best performing *Dianella* with almost a decade of proven performance.

- Has very short, compact canes that will not fall over like the canes on common *Dianella caerulea*.
- It is one of the lowest maintenance of any of our plants. It only needs trimming approximately every 8 years on roadsides. In gardens with good soil conditions it needs trimming after 3 to 4 years.
- Great for borders or mass plantings.
- Excellent heat and drought tolerance, with good cold tolerance. Little Jess™ *Dianella* may discolour in very cold climates like Ballarat and it will discolour in winter in Canberra. Little Jess™ *Dianella* is not highly recommended for mass planting in Canberra.
- Little Jess™ *Dianella* is well proven in the heat of South Australia and Western Australia.

Description	Dwarf, compact, clumping <i>Dianella</i>
Density	6–10 plants per m ² 3–5 per linear metre
