No Fuss, Functional, Reliable

No Fuss: plants that are easy to care for.

Functional: the right plants for the right situation. Whether its green roofs, green walls, rain gardens, roadsides or more, you will find the right functional plant for your situation.

Reliable: plants and turf that are tested and proven to work in your region.

For further technical support and information please visit ozbreed.com.au where you will find licensed growers and articles on all products.

A Guide to Our Logos

almost no maintenance and no irrigation. In extra dry environments, very sandy soils and in severe drought occasional top up watering may be required in the warmer months and will provide more beautiful plants.

Cold Hardy: Will tolerate cold and frost. Check with your local grower if you are in a severely frost affected area to see if the plant is suitable.

Highly Recommended for Mass Plantings: These plants are recommended for mass plantings as they may help reduce weeds, are low maintenance and can generally be used in tough landscapes such as roadsides.

Drought Tolerant: When planted in normal gardening conditions these plants generally require no or little irrigation for most populated areas of Australia. Plants will require watering up to 8 to 12 weeks until established. They are often used on roadside plantings, where they receive

IMPORTANT NOTES

GROWER KNOWLEDGE: This is a general catalogue for the region. For local information on which plants work in your area contact your local grower (see our website). Local grower knowledge is vital, and this catalogue is no substitute.

HEIGHTS: Heights in this catalogue are for general gardening conditions. In well maintained gardens, some plants will get taller.

PLANT NAMES: In this brochure, the genus species and cultivar name are listed like this example: *Lomandra longifolia* 'LM300'. LM300 is the PBR and cultivar name. The brand name or trade name for this plant is TANIKA®, and should not be confused with the true cultivar name. The cultivar or true plant name will always immediately follow the species name enclosed in quotation marks.

POT SIZES: In general, most growers have our plants available in tubes and above. Our Advanced Trees range is available in 175mm/5L pots and above only. All other ranges are supplied in tubes and above.

Plants are Continuously Being Substituted

Substitution of plants can ruin your design. Plants that are of a totally different size, shape or texture are often substituted. Worse still, they are sometimes substituted with plants that will not perform in that situation, or even completely different species.

Why Do They Substitute?

Usually contractors substitute to save a few percent on price, which helps their profit, or allows them to win the bid. Sometimes it is the supplier selling the wrong plant.

***Lomandra confertifolia*: A Bad Substitute**

Sometimes, *Lomandra confertifolia* types are substituted for *Lomandra hystrix* and *longifolia* varieties even though they generally don't survive in tough landscape conditions. *Lomandra confertifolia* occurs naturally only in dry shade and does not perform well in full sun. In comparison to other *Lomandra* types, *Lomandra confertifolia* are weaker, smaller and unable to survive in wet feet.

Our *Lomandra longifolia* and *hystrix* varieties including Tanika®, Katrinus Deluxe®, Nyalla® and Katie Belles™ have been proven to work in tough, low maintenance conditions for years, often staying evergreen when other varieties are browning off.

Evergreen Baby™ *Lomandra* (left) after two and a half years has no loss to root rot, while *Lomandra confertifolia* (right) has been devastated.

How Can You Protect Your Design From Substitution?

Ask for a certificate of authenticity in the contract or in the quality assurance documents (see below).

The contractor at the time of purchase must obtain from the supplier a certificate of authenticity that the plants supplied are authentic and true to type. The plants on the certificate must be the same as the ones in the specification.

OR

The contractor at the time of purchase must obtain from the supplier a certificate of authenticity that the plants marked with an * in the schedule are authentic and true to type. The plants on the certificate must be the same as the ones in the specification.

QUICK PLANT SELECTION GUIDE

Makes comparing and selecting plants from Ozbreed easier. Each plant has basic information such as its size, uses and position.

Height

Plants are arranged by height from smallest to tallest by foliage height, and from left to right across each spread.

More Information

Please see the Ozbreed website for more detailed information on each plant, including tolerances and suitable regions.

Density Per m2

For dense plant growth, far less gaps and quicker weed control, use the higher rate listed. For the form of the plant to be enhanced, or if you are happy to wait a little longer for weed control, use the lower rate listed. For full specimen planting with larger gaps, a lower density should be used based on your own preference e.g. The recommended rate for Tanika® Lomandra is 3-6/m², you may go as low as 1/m² but there will be no weed control. Some plants control weeds better than others, so consider this if planting for weed control.

Density Per LM

Linear metre spacing is for hedging or edging plants. As above use the higher rate listed for a denser hedge or edging.

Top Fire Retardant Plants

The top fire retardant plants in this list are based on scientific evidence and suggestions from various articles. See ozbreed.com.au/landscape-gardening-plants-and-turf-research for more information.

Please note that any plant can burn when exposed to enough flames and heat, it is just that some are less likely, or may take longer to ignite. For this reason you cannot rely on plant selection alone to stop bush fires, but it makes sense to use plants that generally delay in their ignition.

Free Fall™ <i>Casuarina glauca prostrate</i> 'CAS01' (l)	Wide spreading ground cover
Queen Mum™ <i>Agapanthus orientalis</i> 'PMN06' (l)	Large white and blue dual coloured flowers

7

7. Breeze® *Dianella caerulea* 'DCNC0' PBR

Tidy 'no-cane' variety. Tough ground cover plant. Great for erosion control. Fast establishing, spreads quickly, outcompetes weeds. 60–70cm H x 60–70cm W

8

8. Wyeena® *Dianella tasmanica* 'TAS300' PBR

Striking variegated clean foliage. Robust, outcompetes weeds. Very good frost tolerance. Great background plant. 80–90cm H x 80–90cm W

*Note: Please refer to Quick Plant Selection Guide to see if plant is compatible in your state

SPECIFICATION NOTES: Roadside Plant Placement

Almost no maintenance, no irrigation plants

Developed through consultation with Roads Departments and observation of road side plantings over the last 10 years. Note: If sub-standard processed mulch is used with lots of fine grade material, it can increase the likely-hood of root rot diseases. So it is recommended to only use the following plants...

Depressed or raised with fine grade mulch

Use any of the following plants: Shara™, Evergreen Baby™, Katie Belles™ and Tropic Cascade™ Lomandra.

Raised median strips

Use any of the following plants: Tanika®, Nyalla®, Shara™ and Evergreen Baby™ Lomandra and Little Jess™ and Lucia™ (in good soils) Dianella. We suggest using coarse grade mulch with no fines for all roadside applications.

Depressed or raised area with chunky mulch and no fines

Use any of the following plants for depressed areas: Shara™, Evergreen Baby™, Katie Belles™ and Tropic Cascade™ Lomandra.

Use any of the following plants for raised areas: Shara™ and Evergreen Baby™ Lomandra and Little Jess™ and Lucia™ (in good soils) Dianella.

Depressed Median Strips

Use any of the following plants: Shara™, Evergreen Baby™, Katie Belles™ and Tropic Cascade™ Lomandra. These plants cope better with prolonged wet feet, as well as dry conditions.

Raised areas on the side of the road

Use any of the following plants: Shara™ and Evergreen Baby™ Lomandra and Little Jess™ and Lucia™ (in good soils) Dianella.

Depressed areas on the side of the road

Use any of the following plants: Shara™, Evergreen Baby™ Katie Belles™ and Tropic Cascade™ Lomandra.

Batters and sloping areas

Use any of the following plants: Little Jess™ and Lucia™ (in good soils) Dianella.

Downside of path (depressed)

Use any of the following plants: Shara™, Evergreen Baby™, Katie Belles™ and Tropic Cascade™ Lomandra. Water running off a path or roads results in far more wet feet for plants on the down side of the path.

Upside of path (raised)

Use any of the following plants: Shara™ and Evergreen Baby™ Lomandra and Little Jess™ and Lucia™ (in good soils) Dianella.

Evaluation and Development of New Green Life Alternatives for Bio-retention Swales and Erosion

Plant Erosion Control Research Update

Quantifying which plant types are best suited to surface erosion protection on slopes, batters and swales

1) Strappy leaf plants and grasses generally strengthen the soil 5 to 20 times more than shrubs and ground covers.

The following tables detail the best soil strengthening plants based on research completed.

Plant shear vane test results and statistics for Clarendon, NSW. The following plants all strengthened the soil significantly.

2) Testing used a ground shear tester on replicated samples in ground and in pots.

3) This research calculates the average amount a plant strengthens the soil in percentages and kPa (kilopascals), which is useful for erosion control professionals to choose the appropriate plant.

Groups	Difference to bare soil	Significant?	% increase vs bare soil	Shear strength kPa
Little Rev™ ■	1.39	YES	161%	22.8
Carex appressa	1.52	YES	176%	23.8

- Not recommended for QLD. x Not suited to ACT.
- * Based on separate, later test.
- Needs cutting back every 18 months to two years.

Testing plants for inundation tolerance in Bio-retention swales.

1) Evergreen plants look better, and most importantly do not have long dormant periods of low nutrient reduction. Eg; wet feet tolerant evergreen Lomandra removes heavy metals and nutrients all year round, whilst Carex and Juncus are often brown and dormant for up to 6 months of the year.

Carex and Juncus going brown, reducing nutrient absorption

Note: planted winter 2016. Just over two years old at rating. Rounded to nearest number. Mostly rated based on three plants per type.

2) Many new ornamental plants that have superior looks and performance are showing good wet feet tolerance for Bio-retention swales that get periodically inundated.

3) Many of the new wet feet tolerant plants also have far superior drought tolerance.

4) New breeding has greatly increased the wet feet ability of certain plants. Eg; Westringia is not normally able to handle long periods of wet, but Grey Box™ Westringia, and Mundi™ Westringia have shown amazing abilities to handle wet.
