

Aussie Flat Bush™

Rhagodia spinescens 'SAB01' (D)

NATIVE SHRUBS & GROUND COVERS

A low growing compact form of saltbush with blue foliage.

- *Rhagodia spinescens* is found in all mainland states of Australia. It has adapted to inland and coastal situations.
- This compact form makes a great ground cover and performs better if it is pruned annually or more often if a manicured look is desired. On road sides it can be used with less frequent pruning, or no pruning at all.
- It is highly drought tolerant, adapted to low or higher rainfall areas.
- Aussie Flat Bush™ *Rhagodia* copes with frost down to -5° celsius.
- Its blue foliage looks great in mass plantings, but equally as good as a garden specimen plant.
- Compared to the common form, Aussie Flat Bush™ *Rhagodia* is much lower in height.
- It is ideal for roadsides, slopes, commercial and residential landscapes.
- Tolerates heavy soils well in many regions, as well as sandy loam soils.

Aussie Flat Bush™ Salt Bush (in front) is much lower than the common form (behind)

Description	Low growing ground cover/shrub
Density	1-2 plants per m ² 1-2 plants per linear metre
Height & Width	30-50cm x 1m
Flowering	Rarely flowers
Best Planting Time	All year
Uses	Ground cover, mass planting, garden plant
Position	Full sun to light shade Tolerates drought & frost
Soil Type	Most soil types including heavy soils
Care	Water as required for 8-13 weeks until established; in gardens prune twice per year for best look; infrequent pruning on road sides
Where it Works	NSW, ACT, VIC, QLD (non humid inland areas), SA, WA
