

Gold Cluster™

Grevillea juniperina 'H22' (L)

NATIVE SHRUBS & GROUND COVERS

Gold Cluster™ Grevillea is lower growing, more dense and has masses of flowers.

- A beautiful ground cover with masses of small spider like flowers in a vibrant gold-yellow colour.
- Gold Cluster™ Grevillea usually only grows to about half the height of the popular Molonglo variety.
- Also a denser form providing a ground cover more capable of outcompeting weeds in many regions.
- As with most Grevilleas, only use either a native or a slow release fertiliser sparingly.

Description	Low growing ground cover
Density	1-2 plants per m ²
Height & Width	30cm x 80cm-1m
Flowering	Gold-yellow flowers from Jul-Sep
Best Planting Time	March-November
Uses	Ground cover, specimen planting
Position	Full sun to part shade Tolerates drought & cold
