

# Grand Star™

*Diets grandiflora* 'D11' (b)

## This is a semi-compact *Diets* that rarely produces seed.

- There is no question that *Diets grandiflora* is one of the best, most beautiful and toughest landscape plants available in Australia. The only downside is its ability to produce a lot of seed.
- Grand Star™ *Diets* has a very low pollen count compared to the common form, and rarely if ever produces viable seed. Now it is possible to use one of the prettiest and toughest landscape plants without the worry of it seeding everywhere! Shown to produce a low percentage of seed compared to the common form in field tests.
- This safer ornamental strappy leaf plant is highly drought, heat, humidity and frost tolerant.
- Once established it needs little maintenance, only needing cutting back on average every 5 to 7 years if at all.

**Common *Diets grandiflora* (below) produces more seed than Grandstar™ *Diets* (this photo)**

<b>Description</b>	Semi-compact <i>Diets</i> ; rarely produces seed
