

Lucky Stripe™

Lomandra hystrix 'LMV200' (b)

STRAPPY LEAF PLANTS

Ideal for erosion control, mass road side plantings, rain gardens, green walls and home and commercial landscape gardens.

- White and green are the most popular variegation for mass planting, but until now there has never been an ultra-tough no fuss strappy leaf plant with such mass planting appeal. It simply looks good year after year in Australia's extreme conditions.
- From Cairns to Melbourne to Perth, Lucky Stripe™ *Lomandra* has ultra clean foliage, even in humid climates. Blemishes and spots usually greatly effect variegated strappy leaf plants, but Lucky Stripe™ *Lomandra* is an exception, generally remaining spot free.
- Grows well in dry and wet soils and tolerates moderate frosts well.
- Years ago Silver Streak™ *Dianella* became popular due to its white and green foliage, but the plant did not perform long term in most Australian conditions. Now a similar colour contrast can be achieved with a super reliable long lived plant.
- The Australian native Lucky Stripe™ *Lomandra hystrix* 'LMV200' (b) does not produce viable seed, so it will stay where it is planted.

Clean contrasting foliage

Description	White/green variegated foliage
Density	1-2 plants per m ² 1-2 per linear metre
Height & Width	80cm-1m x 90cm
Flowering	Masses of perfumed yellow flowers from September-November
Best Planting Time	March-November
Uses	Feature planting and mass planting
Position	Full sun to part shade; Tolerates frost & drought
Soil Type	Sandy loam to heavy clay soils
Care	Water as needed for 8-13 weeks until established; occasional watering will be required in very dry conditions; cut back every 3-7 years 30cm above the ground
Where it Works	NSW, QLD, VIC, SA & WA
