

Pure Blonde™

Liriope muscari 'LIRBLONDE' (b)

Pure Blonde™
Liriope looks
great planted
with Black Mondo

A very tough Liriope with stunning blonde foliage in spring.

- If you cut the Pure Blonde™ plant back to the ground in July, it will re-shoot blonde in August to September depending on your location.
- Stays blonde for about 3 months in spring, then slowly fades back to green. It is mostly green in summer to survive the heat.
- Only for shaded positions or full sun if sheltered from windy and exposed sites.
- The tips may burn in full sun or windy sites, but the foliage will stay clean in shady positions.
- Tough enough to grow almost anywhere in Australia, including cold Canberra and humid Queensland.

Pure Blonde™
Liriope really
lights up at night

Description	Clumping plant; white foliage in spring
Density	6-12 plants per m ² 3-6 per linear metre
