

# Tanika®

*Lomandra longifolia* 'LM300' (b)

## STRAPPY LEAF PLANTS

**Tanika® Lomandra has been performing in tough landscapes across Australia for over a decade.**

- Tanika is one of the toughest, most reliable and versatile landscape plants.
- An evergreen, low maintenance, non-seeding plant for landscape professionals and gardeners alike.
- One of the most drought tough Lomandras. Excellent for dry slopes and dry shade.
- Modern architectural foliage for gardens and roadsides.
- Soft to touch—great for kids.
- Tanika has proven to be successful in humid areas such as Sydney, however areas prone to wet feet should be avoided. Not recommended for low lying areas Sydney and north due to the increase of phytophthora in the landscape. Shara™ and Evergreen Baby™ Lomandra are phytophthora resistant alternatives for these situations.
- Does well in a wide range of conditions, however, Tanika® Lomandra is best not planted on foredunes. In strong salty winds like Perth, it may need to be planted a few kilometres back.

<b>Description</b>	Improved, compact fine leaf form
<b>Density</b>	3–6 plants per m <sup>2</sup> 2–3 per linear metre
<b>Height &amp; Width</b>	50–60cm x 65cm
<b>Flowering</b>	Small yellow flowers from Apr–Oct
<b>Best Planting Time</b>	March–November
<b>Uses</b>	Ideal for specimen and mass planting in gardens and borders
<b>Position</b>	Full sun to moderate shade; tolerates humidity, frost & drought
<b>Soil Type</b>	Sandy, sandy loam to clay soils
<b>Care</b>	Water as required for 8–13 weeks until established; every 3–10 years cut back 15cm above the ground if required
<b>Where it Works</b>	NSW, ACT, VIC, SA, WA, TAS & QLD (only for non humid regions like Toowoomba with free draining soil)
