

Wingarra® Lomandra is the only *Lomandra confertifolia* with large, deep rhizomes, making it tougher than the rest.

- A fine textured *Lomandra confertifolia* with a contrasting blue-green appearance.
- Looks like a native tussock grass (*Poa*) from a distance. Unlike *Poa*, it generally won't need trimming.
- Wingarra® Lomandra is better spreading than other *Lomandra confertifolia*, making it ideal for border planting and mass planting. *Lomandra confertifolia* types are generally weak in full sun and need shade, just like where they grow naturally. The Wingarra® plant is better than others, but still not as tough as *Lomandra longifolia* or *Lomandra fluviatilis*.
- It is extremely low maintenance and is less likely to brown off in winter.
- Wingarra® Lomandra and other *confertifolia* types are much slower to establish than *longifolia* and *fluviatilis* types, so larger pot sizes will help in the establishment period (min 140mm or larger).
- Works in NSW, ACT, VIC, TAS, SA, WA & QLD (only for non-humid regions like Toowoomba).

Description	Compact, clumping blue-green foliage
Density	4-8 plants per m ² 2-4 per linear metre
Height & Width	40cm x 60cm
Flowering	Small yellow flowers from Sept-Nov
Best Planting Time	March-November
Uses	Mass planting or border plantings
Position	Best in part shade, full sun with irrigation; tolerates humidity & frost
Soil Type	Sandy, sandy loam to clay soils
Care	Water as required for 8-13 weeks until established; occasional watering may be needed for dry inland regions, WA and SA; cut back 15cm above the ground every 3-4 years if required
Where It Works	NSW, ACT, VIC, TAS, SA, WA & QLD (only for non-humid regions like Toowoomba)
