

Twilight Green™

Lepidosperma squamatum 'LEP08' (L)

STRAPPY LEAF PLANTS

The Twilight Green™ plant has dark green strappy leaf foliage with rustic flowers.

- Twilight Green™ *Lepidosperma* is a clean foliage, dark green tussock type plant that grows well in shade or full sun positions.
- In WA it is known as a *Lepidosperma squamatum* and in NSW and Victoria it is known as *Lepidosperma concavum*.
- It prefers free draining soils.
- The true dark green foliage which looks even better in shade makes it highly ornamental.
- Its rustic seed heads which last for many months in summer and autumn add additional polish.
- It can be used as a shade garden plant or in full sun and works well as a border, patio pot or in mass plantings.
- Twilight Green™ *Lepidosperma* is relatively drought tolerant and can handle light to moderate frosts.

A young Twilight Green™ plant
