

IMPORTANT NOTES

GROWER KNOWLEDGE: This is a general catalogue for the region. For local information on which plants work in your area contact your local grower (see our website). Local grower knowledge is vital, and this catalogue is no substitute.

HEIGHTS: Heights in this catalogue are for general gardening conditions. In well maintained gardens, some plants will get taller.

PLANT NAMES: In this brochure, the genus, species and cultivar name are listed like this example: Lomandra longifolia 'LM300'.
LM300 is the PBR and cultivar name. The brand name or trade name for this plant is TANIKA®, and should not be confused with the true cultivar name. The cultivar or true plant name will always immediately follow the species name enclosed in quotation marks.

POT SIZES: In general, most growers have our plants available in 140mm/1.3L pots. Other common pot sizes include 200mm/5L pot, 90mm/410ml pot, 50mm/250ml landscape tube (also known as forestry, native or grow tube). Pre orders are recommended for 90mm pots.

Our Advanced Trees range is available in 175mm/5L pots and above only. All other ranges are supplied in 250ml pots and above.

VIC Catalogue 2021

2021 Beyond

There have been significant changes to the management and the day-to-day running of Ozbreed since our last catalogue was released in 2019. What hasn't changed is our dedication to bringing the most reliable, functional and no fuss plants to the landscaping industry. There are some new release plants in these pages that we are really excited to present to you, plants that fill a gap in the market – shade loving, drought tough, resilient shrubs and groundcovers - that YOU have asked for.

Along with the newest releases, the old favourites remain available and visible in this catalogue. Those plants that, after almost 20 years of being commercially available, continue to appear on plant schedules and in landscapes Australia-wide. These plants remain Ozbreed's most in-demand species in the industry, known by their trade name alone, thanks to their continued performance in increasingly difficult climatic extremes.

We never stop testing and trialling our plants in rugged conditions all over Australia. Whether it be the yet-to-be-released plants in our New Product Development Program, or the trialling of commercially released Ozbreed plants through our Sample Program, it's the feedback that we get from the programs' participants that results in an optimally bred plant. We want to continue to service the industry by breeding the most robust, hardy and beautiful plants available. We want you to be assured that our plants are of the highest quality because we are listening to your feedback.

In the year ahead we are working on increasing our grower network around the country to ensure that the supply of our plants is always available for your designs and in an attempt to avoid substitution of inferior plants in your jobs. Do the best by your design, remember to specify Ozbreed by name for a reliable plant that will perform in the landscape well into the future. We stand by Ozbreed licenced propagators and growers and the quality plants they produce, because at Ozbreed we don't guess, we test.

No Fuss, Functional, Reliable

NO FUSS: Plants that are easy to care for.

FUNCTIONAL: The right plants for the right situation. Whether its green roofs, green walls,

rain gardens, roadsides or more, you will find the right functional plant for

your situation.

RELIABLE: Plants that are tested and proven to work in your region.

For further technical support and information please visit **www.ozbreed.com.au** where you will find licensed growers and articles on all products.

Top 10 Plants

For mass planting, shade,
greenwalls, erosion control,
greenroofs, fire retardant plants,
salt tolerant, rain gardens68-70

Evergreen Baby $^{\mathrm{TM}}$

Lomandra labill. 'LM600' (D

A compact, tough Lomandra with attractive deep-green, fine foliage. About half the size of Tanika® Lomandra, Evergreen Baby™ Lomandra is suited for low line of sight planting requirements or as foreground plants to create a layered effect in residential or landscaped designs. Looks good while tolerating intermittent wet feet and dry periods.

NO FUSS Hardy, small *Lomandra longifolia*-cross, which is low

maintenance in full sun to part shade. Frost and drought

tolerant in sandy loam to heavy clay soils.

FUNCTIONAL Mass plant in coastal locations, native gardens, pots, rain

gardens, bio-retention swales, borders or as a feature plant.

RELIABLE A non-seeding form, making it safer to plant near bushland and

national parks, with golden-yellow flowers in spring.

OZBREED EXTRA Want lime green foliage? Applying agricultural lime annually

and increasing the soil pH, or in naturally occuring alkaline soils, Evergreen ${\rm Baby^{TM}}$ Lomandras foliage responds by

becoming more lime coloured.

Description Compact fine leaf clumping plant

Density 4–8 plants per m²

2-4 per linear metre

Height & Width 40-45cm x 45cm

Flowering | Yellow flowers in spring

Best Planting Time | March-November

Uses Mass planting, feature plant, borders

Position Full sun to part shade; tolerates frost, drought and periodic

wet feet

Soil Type Sandy loam to heavy clay

Care Water as needed until established; cut back 15cm above the ground every 3–5 yrs if required; occasional watering in

dry periods may be needed

Where it Works VIC, QLD (does not work in northern QLD), NSW, ACT,

SA & WA

Dianella caerulea 'DCNCO' (D

Breeze® Dianella is a glossy strap-leafed plant that maintains its tidy, cane-less form. Excellent contrasting foliage when mass planted amongst mounding shrub plantings, spreading moderately to fill gaps or for stabilising erosion-prone slopes.

NO FUSS Exceptional groundcover tendencies, underground rhizome spreads to out-compete weeds while

maintaining its clumping form.

FUNCTIONAL Contemporary grass and meadow gardens, erosion

control on sloped sites, mass planted in commercial

or domestic landscapes.

RELIABLE Fast to establish in most soil types, requiring

occasional pruning for best results. Tolerates

humidity, cold and drought.

Description	Free flowing, dark green Dianella
Density	4-6 plants per m ² 2-3 per linear metre
Height & Width	60-70cm x 60-70cm
Flowering	Pale blue flowers from Sep-Nov
Best Planting Time	March-October
Uses	Mass planted, meadow or Tropical-style gardens
Position	Full sun to part shade; tolerates humidity, cold & moderate drought
Soil Type	Most soils, except poor types lacking nutrition
Care	Water as required for 8–13 weeks until established; every 3–8 years, cut back to 1/3 the height (will look better pruned every 3 yrs)
Where it Works	VIC, NSW, ACT, QLD, SA & WA

$Blaze^{TM}$

Dianella tasmanica 'NPW2' (D

A Dianella with bronze-tinged foliage in the cooler months which lends it a Phormium or Cordyline quality, but with more reliability. The superior heat tolerance of this native plant during extreme summer heat, brings seasonal interest to the garden with a chameleon-like change in foliage colour from purple-bronze to green.

NO FUSS Blaze[™] Dianella is less likely to scorch on hot summer

days, unlike common Phormium or Cordyline forms.

FUNCTIONAL Roadside, commercial planting, mass planting,

contrasting accent plants in residential gardens.

RELIABLE A great performer in full sun and shade in less

humid states.

Katrinus Deluxe

Lomandra longifolia 'Katrinus Deluxe' (

Evergreen, uniformally low growing and suitable to plant en masse in swathes or in clumps amongst mounded plantings to create contrast. Masses of delicately perfumed yellow flowers adorn this semi compact, fine-leaved Lomandra in spring. Survives on natural rainfall in most populated areas in Australia due to its long root zone, with occasional top up watering required during extreme periods of drought.

NO FUSS Drought and cold tolerant, second-line salt tolerant and suited

to a wide range of soils from sandy to heavy clay.

FUNCTIONAL Mass plant in coastal and rooftop locations. Commercial

situations such as golf courses, factories and offices. Native & domestic gardens. Slopes or erosion prone areas.

Avoid front-line salt.

RELIABLE History has shown no viable seed over a decade, so safer to

plant near bushland and national parks.

OZBREED EXTRA Full sun to moderate or heavy shade, this low maintenance

plant maintains good winter colour in colder climates while

looking uniform and clean.

Description	Improved semi-compact fine leaf Lomandra
Density	2-6 plants per m ² 1.5-2 per linear metre
Height & Width	70cm x 70cm
Flowering	Masses of perfumed yellow flowers from October-November
Best Planting Time	March-November
Uses	Mass planting and specimen planting
Position	Full sun to moderate shade; Tolerates cold & drought
Soil Type	Sandy, sandy loam to clay soils
Care	Water as required for 8–13 weeks until established; cut back to 20cm or half the height if required after 7 years
Where it Works	VIC, NSW, ACT, SA, WA, TAS & QLD (do not plant in depressed areas)

Dianella revoluta 'DRG04' (D

The grey-green foliage of this small Dianella is complemented by the multitude of blue flowers adorning it in spring. Remains neat and tidy through drought, periodic wet spells and frost.

NO FUSS Cleaner foliage, more flowers and longer-lived than

other comparative Dianellas, adapts to the climatic

extremities of frost and drought.

FUNCTIONAL Low growing and well suited to borders, as foliage

contrast in meadow or prairie planting, or mass planting in commercial and residential situations.

RELIABLE Holds its form with slight spread, as the plants rhizomes

and roots stabilise slopes and erosion prone areas.

Description	Medium sized <i>Dianella revoluta</i>
Density	4-6 plants per m ² 2-3 per linear metre
Height & Width	50cm x 50cm
Flowering	Small blue flowers from Oct-Nov
Best Planting Time	March-October
Uses	Mass plantings, foliage or grassy gardens; commercial & residential
Position	Full sun to part shade. Tolerates drought & frost
Soil Type	Sandy or loam soils; heavy soils if raised planting; avoid very poor soil
Care	Water as required for 8–13 weeks until established; cut back 15cm above the ground every 3–5 years if required
Where it Works	VIC, NSW, ACT, SA, WA, TAS & QLD (only for non humid regions like Toowoomba with free draining soil)

Cassa Blue®

Dianella caerulea 'DBB03' (D

Dianella with upright, glaucous-blue foliage, its compact clumping form brings structure to landscapes. Purple and yellow flowers adorn the foliage for up to 3 months in spring. A consistent performer highly regarded as a landscape mainstay for over 15 years.

NO FUSS Annual trim of spent foliage refreshes this Dianella.

FUNCTIONAL Specimen in garden beds, structural borders

and mass planted. One of the longest flowering

Dianellas available.

RELIABLE Thrives in the lower humidity of Melbourne.

THE lower humble of Melbourne.	
Description	Clumping, compact rich blue foliage
Density	4-8 plants per m ² 2-4 per linear metre
Height & Width	50cm x 40cm
Flowering	Masses of purple & yellow flowers from September-November
Best Planting Time	March-November
Uses	Garden or specimen planting
Position	Full sun to partial shade Tolerates drought & cold
Soil Type	Wide variety of soils; avoid very poor soil
Care	Water as required for 8–13 weeks until established; remove older leaves as required or cut back halfway every 3–5 years
Where it Works	VIC, ACT, SA, WA, TAS, NSW (north of Sydney only for maintained gardens) & QLD (only for maintained gardens)

Little Jess TM

Dianella caerulea 'DCMP01' (D

The landscape designer's strappy perennial of choice. For those tricky, shaded to full sun positions, where tough, year-round lush green foliage is required. Its compact form looks good mass planted under specimen trees, in swathes, or along borders in residential or commercial landscapes.

NO FUSS Cold, humid and heavy-shade tolerant, very low maintenance once established. Very drought tolerant compared to other

Dianella caerulea varieties, including Breeze® Dianella.

FUNCTIONAL Great for contemporary residential and commercial

designs, dry slopes and dry shade, foreground planting and borders, roadside verge plantings maintaining line of sight

requirements.

RELIABLE High drought and humidity resistance & year-round evergreen

foliage (except for Ballarat in winter).

OZBREED EXTRA Masses of contrasting purple flowers in spring. The short

canes of this dwarf form allows foliage to stay upright, unlike

common Dianella forms that tend to fall over.

Description	Dwarf, compact, clumping Dianella
Density	6–10 plants per m ² 3–5 per linear metre
Height & Width	40cm x 40cm (taller in good soils)
Flowering	Purple flowers from Sep-Nov
Best Planting Time	March-November
Uses	Specimen & mass plantings for commercial and residential use
Position	Full sun & moderate to heavy shade; Tolerates drought & humidity
Soil Type	Wide variety of soils; avoid very poor soil
Care	Water as required for 8–13 weeks until established; cut back to half the height every 2–3 yrs for gardens, 4–8 yrs for road sides

Where it Works VIC, NSW, ACT, QLD, SA, WA & TAS

Lomandra hystrix 'LHBYF' (D

Golden fragrant flowers sit like fireworks amongst the green strappy Lomandra foliage, lasting many weeks in spring and again in autumn. Suitable for the tropics and colder regions as specimen or mass plantings.

NO FUSS Successful in full sun, shade and wet shade,

it's both drought and cold tolerant.

FUNCTIONAL Mass planted commercial or residential designs,

roadsides, green walls, borders, erosion prone areas or sloping sites and bio-retention swales.

RELIABLE Perfect for rain gardens due to it's root rot and

humidity resistance.

Description	Full sized Lomandra hystrix
Density	1–3 plants per m ² 1–1.5 per linear metre
Height & Width	1.5-1.8m x 1.2-1.5m
Flowering	Masses of perfumed yellow flowers from September–November
Best Planting Time	March-November
Uses	Feature planting and mass planting; great for periodically wet areas
Position	Full sun to heavy shade; Tolerates humidity, cold & drought
Soil Type	Sandy loam to heavy clay soils
Care	Water as required for 8–13 weeks until established; occassional watering will be required in very dry conditions; cut back 30cm above the ground every 3–7 years
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Wingarra®

Lomandra confertifolia 'SIR5' (D

A contrasting blue-green Lomandra with a fine Poa-like tussockgrass appearance, it creates a soft aesthetic in the landscape. Its long rhizome activity digs deep below soil-level and makes it far tougher than other, weaker Lomandra confertifolia species.

NO FUSS Tough with very few maintenance requirements and

more likely to hold its colour through winter.

FUNCTIONAL Compact clumping form suits borders, slopes,

erosion-prone areas and mass planting.

RELIABLE Lomandra confertifolia are often considered to be

weaker than longifolia type Lomandra, unless they have strong rhizomes such as this Wingarra® Lomandra.

Description	Compact, clumping blue-green Lomandra
Density	4-8 plants per m ² 2-4 per linear metre
Height & Width	40cm x 60cm
Flowering	Small yellow flowers from Sept-Nov
Best Planting Time	March-November
Uses	Mass planting or border plantings
Position	Best in part shade, full sun with irrigation; tolerates humidity & frost
Soil Type	Sandy, sandy loam to clay soils
Care	Water as required for 8–13 weeks until established; occasional watering may be needed for dry inland regions, WA and SA; cut back 15cm above the ground every 3–4 years if required
Where It Works	VIC, NSW, ACT, TAS, SA, WA & QLD (only for non-humid regions like Toowoomba)

LuciaTM

Dianella caerulea 'DC101' (D

A low growing, vigorous spreading evergreen Dianella with excellent weed suppressing capabilities and masses of mulberry coloured flowers. Ozbreed's cleanest and best performing perennial, Lucia™ Dianella loves the climatic extremes. A great low cost groundcover option when planted at 4 - 6 plants per m².

NO FUSS After initial establishment, generally no maintenance required

for at least 4 years.

FUNCTIONAL For weed suppression, mass plant on roadsides, median strips

and borders while maintaining line of sight requirements. In residential gardens, in full to part sun positions.

RELIABLE Suitable for coastal and inland climates, drought and

frost tolerant to -7 degrees. Ozbreed's most cold tolerant

Dianella.

OZBREED EXTRA Multiple rhizome shoots allow for dense coverage,

weed suppression & quicker damage recovery in high

traffic zones.

Description	Low growing, spreading Dianella with deep green foliage
Density	4-6 plants per m ² 2-3 per linear metre
Height & Width	30-40cm x 50cm
Flowering	Masses of blue/purple flowers from Sep-Nov; berries in summer
Best Planting Time	March-November
Uses	Mass planting for roadsides, median strips and borders
Position	Full sun to part shade Tolerates drought & frost
Soil Type	Sandy loam to clay soils; avoid poor soils
Care	Water as required for 8–13 weeks until established; almost no maintenance except to cut back to half the height every 4–8 years
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Little RevTM

Dianella revoluta 'DR5000' (D

Architectural form and blue-grey foliage suits modern landscape design applications as a feature or swathe planting. The fine stems and purple flowers in spring bring contrast to the garden with low maintenance requirements.

NO FUSS Thrives in sun and part shade in low humidity zones

such as Melbourne.

FUNCTIONAL Contemporary residential and commercial gardens.

Structural form and low height makes it perfect for retaining line of sight requirements on roadsides.

RELIABLE Hardy with good drought and frost tolerance in a range

of soil types.	
Description	Compact, blue-grey perennial; architectural foliage
Density	6-10 plants per m ² 3-5 per linear metre
Height & Width	30-40cm x 30-40cm
Flowering	Small purple flowers from Oct-Nov
Best Planting Time	March-October
Uses	Commercial and residential modern landscapes
Position	Full sun to moderate shade; tolerates drought & frost
Soil Type	Moderate heavy to free draining soil; avoid very poor soil
Care	Water as required for 8–13 weeks until established; cut back to 1/3 the height every 3 to 5 years; do not excessively irrigate
Where it Works	VIC, ACT, SA, WA, TAS & NSW (must have good free draining soil for Sydney)

King Alfred®

Dianella caerulea 'JOHN316' (D

Our best erosion control Dianella available, with a binding strength of 752% in tests. A perennial with masses of darkgreen strappy leaves. The purple and yellow flowers are held high above the foliage in spring.

NO FUSS King Alfred® Dianella's naturally short canes help

maintain its tidy architectural shape without collapsing.

FUNCTIONAL Sloping sites, or anywhere requiring erosion control,

rain gardens and bio-retention swales, roadside, commercial mass planting or residential understorey

planting in full sun to moderate shade.

RELIABLE Loves and needs a regular biannual prune to extend

the performance of this fast-growing Dianella.

With pruning it outlasts other Dianella.

Without pruning it will outgrow its environment

without pruning, it will outgrow its environment.	
Dense, compact blue green foliage	
2-4 plants per m ² 1.5-2 per linear metre	
70cm x 70cm	
Purple & yellow flowers that reach 1m high from September–November	
March-November	
Mass planting or specimen planting	
Full sun to moderate shade; tolerates humidity, cold and moderate drought	
Wide variety of soils; avoid very poor soil	
Water as required for 8–13 weeks until established; trim back to base every 1–2 years; use a slow release fertiliser in spring if required	

Where It Works VIC, NSW, ACT, QLD, SA, WA & TAS

SharaTM

Lomandra fluviatilis 'ABU7' (D

Shara™ Lomandra is a fine-foliaged, strappy plant that is versatile and contemporary, highly resistant to disease and climatic extremes and is the go-to choice for bio-retention swales. Soft to touch but hardy enough for children's play areas, its compact, evergreen form is covered in masses of flowers in spring. This clumping perennial with a narrow, grass-like leaf appears blue-grey in the landscape.

NO FUSS

Dry, cold, drought, wet, humid, phytophthora tolerant - literally no fuss. Copes better than most other Lomandra varieties in less well-drained soils with intermittent wet feet but avoid permanently waterlogged situations.

FUNCTIONAL

Rooftop and rain gardens, green walls, bio-retention swales, commercial and residential mass plantings or rockeries.

RELIABLE

Thrives in exposed conditions, its compact form is covered in non-viable seed in spring. Safe to plant around bushland.

OZBREED EXTRA

Most adaptable Lomandra, even in poor or temporarily water-logged soils, its blue-grey foliage is complementary to surrounding plantings of mixed species.

Description	Fine leaf, compact Lomandra with blue grey tones
Density	4-6 plants per m ² 2-3 per linear metre
Height & Width	45-55cm x 50cm
Flowering	Yellow flowers sitting above the foliage from September- November
Best Planting Time	March-November
Uses	Mass planting in wet and dry areas
Position	Full sun to moderate shade Tolerates humidity, cold & drought
Soil Type	Tolerates a wide variety of soils
Care	Water as needed for 8–13 weeks until established; cut back 15cm above ground every 3–10 years if required
Where It Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Nyalla®

Lomandra longifolia 'LM400' 🕁

Nyalla® Lomandra is one of our hardiest plants. The grasstreelike foliage effectively catches the breeze, bringing dynamic movement to the landscape. Great choice for coastline planting due to its frontline salt tolerance and effective erosion control.

NO FUSS Drought, cold and salt tolerant - suitable for inland

and coastal climates in soils ranging from sandy

FUNCTIONAL Successful as specimen plantings in pots, as an

> accent or mass planted in both commercial, roadside and domestic designs. Great for coastal landscapes.

RELIABLE Evergreen and rarely produces viable seed,

no annual pruning required. Outcompetes weeds

better than many Lomandra cultivars.

Description	Improved semi-compact blue-hued fine leaf
Density	2-5 plants per m ² 1-2 per linear metre
Height & Width	80-90cm x 80-90cm
Flowering	Small yellow flowers from Sep-Oct
Best Planting Time	March-November
Uses	Mass planting & specimen planting
Position	Full sun to moderate shade Tolerates cold & drought
Soil Type	Sandy, sandy loam to clay soils
Care	Water as required for 8–13 weeks until established; cut back 30cm above the ground every 3–10 years if required
Where it Works	VIC, NSW, ACT, TAS, SA & WA

Lucky StripeTM

Lomandra hystrix 'LMV200' (D

A highly durable white and green variegated Lomandra that withstands climatic extremes while remaining relatively blemish free. Add organic contrast and shift the texture of a mass planting using the variegated, clean foliage of Lucky Stripe™ Lomandra.

NO FUSS A long-lived performer even in humid climate zones,

handles drought and frost, flowering in spring.

FUNCTIONAL Bio-retention swales or raingardens, sloping or erosionprone sites, as a contrasting plant in green walls or

mass planted commercial or residential gardens.

RELIABLE The male-only flowers and naturally no female seed set

makes it a safer choice to plant near bushland.

Description	White/green variegated foliage
Density	1–2 plants per m ² 1–2 per linear metre
Height & Width	80cm-1m x 90cm
Flowering	Masses of perfumed yellow flowers from September–November
Best Planting Time	March-November
Uses	Feature planting and mass planting
Position	Full sun to part shade; Tolerates frost & drought
Soil Type	Sandy loam to heavy clay soils
Care	Water as needed for 8–13 weeks until established; occassional watering will be required in very dry conditions; cut back every 3–7 years 30cm above the ground
Where it Works	VIC, NSW, QLD, SA & WA

Tanika®

Lomandra longifolia 'LM300' (

A hardy evergreen perennial, Tanika® Lomandra's soft, fine foliage and weeping habit continues to make it a popular choice in modern designer gardens and landscapes after more than 15 years. The contrasting and perfumed yellow flowers appear in spring. Its clumping habit and year-round, eye-catching deep-green leaf is highly adaptable to most Australian climatic conditions - consolidating its position as our most in-demand Lomandra.

NO FUSS Suitable for sandy through to clay soils, cold and shade

tolerant, very low maintenance once established.

FUNCTIONAL Great for children's play areas, contemporary residential

and commercial designs, dry slopes and dry shade, roadside verge plantings maintaining line of sight

requirements.

RELIABLE High drought resistance & year-round evergreen foliage.

OZBREED EXTRA Non-seeding variety, making it a good choice near bushland and along borders of national parks.

Description	Improved, compact fine leaf form
Density	3-6 plants per m ² 2-3 per linear metre
Height & Width	50-60cm x 65cm
Flowering	Small yellow flowers from Apr-Oct
Best Planting Time	March-November
Uses	Ideal for specimen and mass planting in gardens and borders
Position	Full sun to moderate shade; tolerates humidity, frost & drought
Soil Type	Sandy, sandy loam to clay soils
Care	Water as required for 8–13 weeks until established; every 3–10 years cut back 15cm above the ground if required
Where it Works	VIC, NSW, ACT, SA, WA, TAS & QLD (only for non humid regions like Toowoomba with free draining soil)

Tropic CascadeTM

Lomandra hystrix 'LHWP' (D

Lush, weeping emerald-green Lomandra adorned with perfumed, male flowers in spring. A L. hystrix variety, half the size of the common form, suited to varying climates from colder, frosty areas of the southern states, to tropic and subtropic regions.

NO FUSS

A tough, native plant that performs well in drought, or when exposed to periodic wet feet and shadier aspects

or combination wet/heavy shade conditions.

FUNCTIONAL Rain gardens, bio-retention swales, erosion control, mass commercial planting. Makes a lush, beautiful indoor potted plant or clumped in mixed plantings.

RELIABLE Maintain its compact form by pruning every 3-4 years.

Description	Weeping Lomandra hystrix
Density	2-6 plants per m ² 1.5-3 per linear metre
Height & Width	60-80cm x 60-80cm (maintains smaller height when cut back every 3-4 years)
Flowering	Sterile male yellow flowers from Sep-Nov
Best Planting Time	March-November
Uses	Specimen/mass plantings for residential or commercial use
Position	Full sun to heavy shade Tolerates humidity, drought & moderate frost
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in spring; cut back 30cm above the ground every 3 to 7 years.

Tasred®

Where It Works

Dianella tasmanica 'TR20' (D

Ornamental flax lily with contrasting green and red tones, Tasred® Dianella is one of our most in-demand plants. The complementary yellow and purple flowers precede purple berries in spring. Contrast with mounded shrubs in lush landscape designs or harness its erosion controlling properties on a slope.

VIC, NSW, QLD, ACT, SA & WA

NO FUSS

Drought and frost tolerant, glossy Phormium-like foliage.

FUNCTIONAL Japanese style and tropical gardens, mass planted or as an accent in commercial and domestic landscapes.

> established; trim older leaves as required and cut back halfway every 3-7 years to encourage

VIC, NSW, ACT, TAS, SA, WA & QLD (only for non humid regions like Toowoomba with free draining soil)

RELIABLE

The dense, tidy shape is maintained in Melbourne's

non-humid climates, in both shade and sun.	
Description	Ornamental flax lily with contrasting green and red toned foliage
Density	4-6 plants per m ² 2-4 per linear metre
Height & Width	45cm x 40-50cm
Flowering	October-November
Best Planting Time	March-October
Uses	Mass plantings; low water gardens
Position	Full sun to heavy shade Tolerates frost & moderate drought
Soil Type	Sandy, sandy loam and clay soils; avoid very poor soils
Care	Water as required for 8-13 weeks until

new growth

Where it Works

Pacific SkyTM

Lomandra confertifolia subsp rubiginosa 'LM700'PBR intended

A blue-hued Lomandra confertifolia with strong rhizome activity that has seen it perform better in heavy soils and full sun than other L. confertifolia trial plants. The dense fine-leafed foliage and arching habit adds appeal to mass plantings, mixed species clumped plantings and native or Mediterranean style landscapes. The yellow, perfumed flowers in spring contrast beautifully against the blue tones of the foliage.

NO FUSS In shaded and dry areas under tree canopies or difficult

garden beds situated below a building's overhang.

FUNCTIONAL Native and Mediterranean landscapes, mass planted,

borders, rockeries, accent planting and in dry shade.

RELIABLE The ground-hugging habit of this Lomandra aids in weed

suppression, while keeping soil moist.

OZBREED EXTRA The vigorous rhizome activity of this Lomandra confertifolia

subsp rubiginosa contriubutes to its hardiness in the ground and low maintenance beyond normal establishment period.

Description	Dense, ground hugging, blue foliage Lomandra
Density	2-5 plants per m ² 1-2 per linear metre
Height & Width	50-70cm x 60-90cm (up to 1.2m wide at maturity)
Flowering	Perfumed yellow flowers Sept - Nov
Best Planting Time	Mar-Nov
Uses	Border edging, mass planting, accent planting near rockeries, difficult dry spots under trees
Position	Full sun to heavy shade; drought & frost tolerant
Soil Type	Wide variety of soils, sand to heavy clay, avoid wet feet
Care	Water as required until established; if needed cut back 15cm above the ground every 3–5 yrs if required
Where It Works	VIC, Central NSW, South NSW, SA & WA (further testing required for other regions)

Fine Divine TM

Dietes bicolor 'Di2' (D

The compact architectural form of Fine Divine™ Dietes is maintained in the landscape thanks to its tight clumping habit. Tough and attractive in the most extreme climatic conditions, it's smaller and less seed producing than the common form. Flowers in warm tones of pale yellow with black-brown spots, float around the foliage like butterflies in spring and summer.

NO FUSS A tough and hardy Dietes, resistant to drought,

humidity and frost in most soil types.

FUNCTIONAL Mass planting, commercial and residential mixed

plantings. Contrasting foliage texture when included as clumped plantings in mounded shrub gardens.

RELIABLE Distinctive flowers with low pollen count result in rare

seed production, making it safer near bushland. A super tough and reliable, low-risk landscape plant.

Description	Compact Dietes; rarely produces seed
Density	4-6 plants per m ² 2-3 per linear metre
Height & Width	60-70 cm x 60-70 cm
Flowering	Yellow flowers in spring/summer
Best Planting Time	March-November
Uses	Residential and commercial landscapes
Position	Full sun to part shade; drought, humidity & frost tolerant
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; cut back every 6 to 8 years
Where It Works	VIC, South QLD, NSW, ACT, SA & WA

Grand StarTM

Dietes grandiflora 'Di1' (

The most beautiful white blooms with lilac and yellow markings adorn this tough, semi compact plant in spring and summer. The clumping, strappy ornamental foliage is extremely low maintenance and very hardy in most conditions. This popular and tough landscaping mainstay improves on the common form, due to its low pollen count and significantly lower seed set.

NO FUSS Tolerant of drought, heat, humidity, most soil types

and frost. Cut back every 5-7 years.

FUNCTIONAL Mass planting, commercial and residential mixed

plantings. Contrasting foliage texture when included in shrub and perennial plantings.

RELIABLE Produces little viable seed and low pollen count,

making it a safer choice near bushland.

Description	Semi-compact Dietes; safer, significantly lower seed set
Density	4–6 plants per m² 2–3 per linear metre
Height & Width	60-70 cm x 60-70 cm
Flowering	White flowers with splashes of purple and yellow from October–January
Best Planting Time	March-November
Uses	Residential and commercial landscapes
Position	Full sun to part shade; drought, humidity & frost tolerant
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; cut back every 5 to 7 years
Where It Works	VIC. South OLD. NSW. ACT. SA & WA

Clarity BlueTM

Dianella hybrid 'DP401' (D

This striking, blue Dianella hybrid is a tough clumping plant with clean glaucous foliage. Clarity Blue™ Dianella takes the best attributes from both its parents, a combination of Utopia® and Cassa Blue® Dianella. The purple flowers are held high above the plant on stems which create a sculptural point of interest during spring. Showy, large purple berries follow in summer.

NO FUSS Drought and cold hardy. Handles periodic wet feet better

than other blue foliage Dianella, but avoid prolonged

exposure.

FUNCTIONAL Best mass planted in swathes of group plantings for colour

contrast, used in borders or as accents. Suited to Japanese

garden styles or low water use gardens.

RELIABLE Clean and crisp blue clumping foliage with less leaf damage

in free to moderate draining soils.

OZBREED EXTRA Well-suited to the modern landscaping palette of glaucous,

grey-blue hues in the landscape.

5	
Description	Blue foliage clumping Dianella
Density	4-8 plants per m ²
	2–4 per linear metre
Height & Width	55cm x 45cm
Flowering	September-November
Best Planting Time	March-November
Uses	Colour contrast, accent plant, group plantings
Position	Full sun to part shade
	Tolerates frost & drought
Soil Type	Well drained soils to clay loam
Care	Water as required for 8-13 weeks until established; use
	slow release fertiliser after first two months, then only if
	required in spring; trim older leaves annually
Where It Works	VIC, NSW, ACT, SA, WA, TAS, QLD

RELIABLE

Shadow Star™ Libertia is the improved form of the popular Australian native with larger flowers and wider, more elegant weeping foliage than the common Libertia form. Shade-loving white flowers bloom in spring and are held high above the foliage.

NO FUSS In light to moderately heavy shade, it brightens up

darker parts of the garden with its white blooms and

shiny, green strappy leaf.

FUNCTIONAL Native gardens, mixed plantings, shady gardens,

mass planting, cottage gardens and container planting, along driveways and other slim boundaries.

Perfect for south facing, shaded sites or in beds

overshadowed by neighbouring buildings, due to its

rare quality of shade flowering.

Description	Wider weeping foliage, clean white flowers
Density	4-6 plants per m ² 2-4 per linear metre
Height & Width	30-40 cm x 40-50 cm
Flowering	White flowers in spring
Best Planting Time	September - April
Uses	Mass planting, cottage gardens, containers
Position	Light - Moderately heavy shade; light frost & moderate drought tolerance once established
Soil Type	Most soil types, prefers moist with moderate drainage
Care	Water as required for 8–13 weeks until established; prune early August if required
Where It Works	VIC, NSW, TAS, SA & WA

Sweet Mist®

Phormium tenax 'PH0S2' (D

The exceptional bronze foliage of Sweet Mist® Phormium brings welcome contrast to low borders, positioned at the front of beds or as a specimen planting. With moderate dry tolerance, this Phormium requires irrigation in Melbourne.

NO FUSS Reliable in full sun to part shade, cold hardy with

heavy frost tolerance.

FUNCTIONAL Mass planting, low borders, mixed plantings,

contrasting foliage, container planting, coastal

contemporary garden designs.

RELIABLE Cleaner foliage than other bronze Phormium forms.

Plant in full sun in coastal locations or a shaded

aspect away from sea breeze.	
Description	Ultra-compact bronze Phormium
Density	6-10 plants per m ² 3-5 per linear metre
Height & Width	40cm x 40cm
Flowering	N/A
Best Planting Time	March-October
Uses	Mass plantings, low borders, fill in plant, containers and patio pots
Position	Full sun to part shade Tolerates frost & moderate dry
Soil Type	Tolerates a wide variety of soil types
Care	Water as needed for 8–13 weeks until established; ensure crown or base of plant is not below soil level; remove older foliage as required or cut back to half the height every 5 to 7 years
Where It Works	VIC, TAS, SA, WA, ACT & NSW (not suited to north

of Sydney and QLD)

Dianella tasmanica 'DT23' (D

Emerald Arch® Dianella has lush, broad, deep green leaves that resemble a Phormium, making it the perfect choice for tropical style gardens in cooler climatic regions. The majestic, broad arching leaves make a statement when used informally as a hedge or mass planted along paths. This adaptable Dianella has low water requirements and is better suited to gardens built on well drained to clay soils.

NO FUSS Evergreen for most of the year in cold, frost and

drought tolerant.

FUNCTIONAL Tropical style gardens, formal gardens, mass planting,

commercial and residential mixed planting designs,

or shade gardens north of Victoria.

RELIABLE The blue and yellow flowers in spring contrast against

the glossy green foliage with low water requirements.

Description	Flax Lily with broad arching leaves
Density	4-6 plants per m ² 2-3 per linear metre
Height & Width	55cm x 50cm
Flowering	Blue/yellow flowers from Sep-Nov
Best Planting Time	March-October
Uses	Mass plantings and specimen plantings; low water gardens
Position	Full sun to heavy shade. Tolerates frost & drought
Soil Type	Well drained to clay soils; avoid very poor soil
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in spring; remove older leaves as required; cut back halfway every 3–7 years
Where It Works	VIC, NSW, ACT, TAS, SA & WA

Reading as silver from a distance, the cream and green variegation of Silverlawn™ Liriope is similarly striking up close. Creates a feature when planted en masse in commercial or residential designs and brightens up the shadier areas under trees or when planted to contrast with feature plants.

NO FUSS Hardy and tough in cold, frost and drought, in many

soil types.

FUNCTIONAL Brightening dark areas of the garden, commercial or residential mass plantings, as an accent or

contrasting and adding definition to companion plantings. Under lights in a well-lit night garden,

this Liriope really shines.

RELIABLE Mow once a year in winter to aid new flush of growth in spring. White delicate flowers appear

in late summer.

Description Low grow

Description	Low growing variegated Liriope
Density	6-10 plants per m ² 3-5 per linear metre
Height & Width	Approx. 35cm x 40cm
Flowering	White toned flowers from Jan-Feb
Best Planting Time	March-November
Uses	Colour contrast, accent/group plantings
Position	Full sun to heavy shade Tolerates frost & drought
Soil Type	Wide variety of soil types
Care	Water as required for 8-13 weeks until established; trim older leaves or cut back annually in winter
Where it Works	VIC, NSW, ACT, QLD, SA, WA, TAS & NT

AmethystTM

Liriope muscari 'LIRTP' (

This compact, dark green Liriope boasts long-lasting, deep purple flowers held high above the emerald green foliage during summer. It grows in strappy clumps, remaining evergreen throughout the year, holding reasonable colour in winter unlike common Liriope forms.

NO FUSS Grows well all over Australia, from extreme cold through to hot dry regions, handles humidity, in full

sun to heavy shade.

FUNCTIONAL A clean plant, well suited to flower gardens, rockeries,

borders and mass planting.

RELIABLE Looks good in late summer when other plants are

tired or past their prime.

Description	Compact, dark green Liriope
Density	6-10 plants per m ² 3-5 per linear metre
Height & Width	40cm x 40cm
Flowering	Deep purple flowers Jan-Feb
Best Planting Time	April-October
Uses	Mass planting, rockeries, flower gardens, specimen plant
Position	Full sun, moderate to heavy shade Tolerates frost, drought & humidity
Soil Type	All soil types
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in spring; cut back to the ground annually
Where it Works	VIC, NSW, ACT, QLD, SA, WA, TAS & NT

Isabella®

Liriope muscari 'LIRF' (D

Pink flowers pop against the dark green foliage of this lawn alternative that works well planted around steppers, as a luscious groundcover or living mulch under a feature tree. In full sun, drought and frost, Isabella® Liriope performs and recovers from damage better than mondo grass.

NO FUSS A low maintenance lawn alternative, needs just one mow a year in winter to remove old growth, before it

mow a year in winter to remove old growth, before it reshoots with clean & vigorous new spring foliage.

FUNCTIONAL A smart border plant, mass planted, between pavers, as a lawn alternative in full sun and up to 90% shade.

RELIABLE Once established, its spreading habit acts as a weed

suppressor and living mulch.

Description	Fine leaf, compact spreading Liriope	
Density	6-12 plants per m ² 4-8 per linear metre	
Height & Width	40 cm x 50 cm; 15–20 cm x 20–30 cm when mown once a year	
Flowering	Masses of pink flowers from Jan-Feb	
Best Planting Time	March-October	
Uses	Lawn, garden borders, specimen & mass planting; ideal for use around stepping stones	
Position	Full sun to heavy shade Tolerates frost, drought & humidity	
Soil Type	All soil types	
Care	Water as required for 8–13 weeks until established; mow/cut back once per year in July–August	
Where it Works	VIC, NSW, ACT, QLD, SA, WA, TAS & NT	

Liriope muscari 'LIRJ' (D

It's the fine waxy leaf, dense and compact evergreen growth and consistent height that makes this Liriope, 'just right'. In sun and shade, all over Australia, the adaptability of Just Right® Liriope to all soil types as well as its general phytophthora resilience, makes it a smart landscaping choice.

NO FUSS With leaves that are twice as thick, it grows well in a range of climates and burns less in full sun, frost and

extreme heat than other forms of Liriope.

FUNCTIONAL Roadsides, mass commercial plantings, feature

plantings, borders and residential designs.

RELIABLE Attractive light purple flowers add some highlights

in late summer. Drought resistant.

Description	Evergreen, clean growing Liriope
Density	4-9 plants per m ² 2-4 per linear metre
Height & Width	50cm x 50cm
Flowering	Light purple flowers from Jan-Feb
est Planting Time	March-October
Uses	Mass planting and specimen planting along paths and fences
Position	Full sun to heavy shade; Tolerates frost, drought & humidity
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; almost no maintenance; trim as required and cut back every 3–6 years
Where it Works	VIC, NSW, ACT, QLD, SA, WA, TAS & NT

Pink PearlTM

Liriope muscari 'VS001' (D

A low growing Liriope with sweet pink flowers that complement its compact, cream and green foliage variegation. A tough contender in borders or mass planted as a groundcover in sun or shade. Position in a shaded or semi-shaded micro climate.

NO FUSS Low growing form is happy in humid and drought

conditions as well as frost and cold.

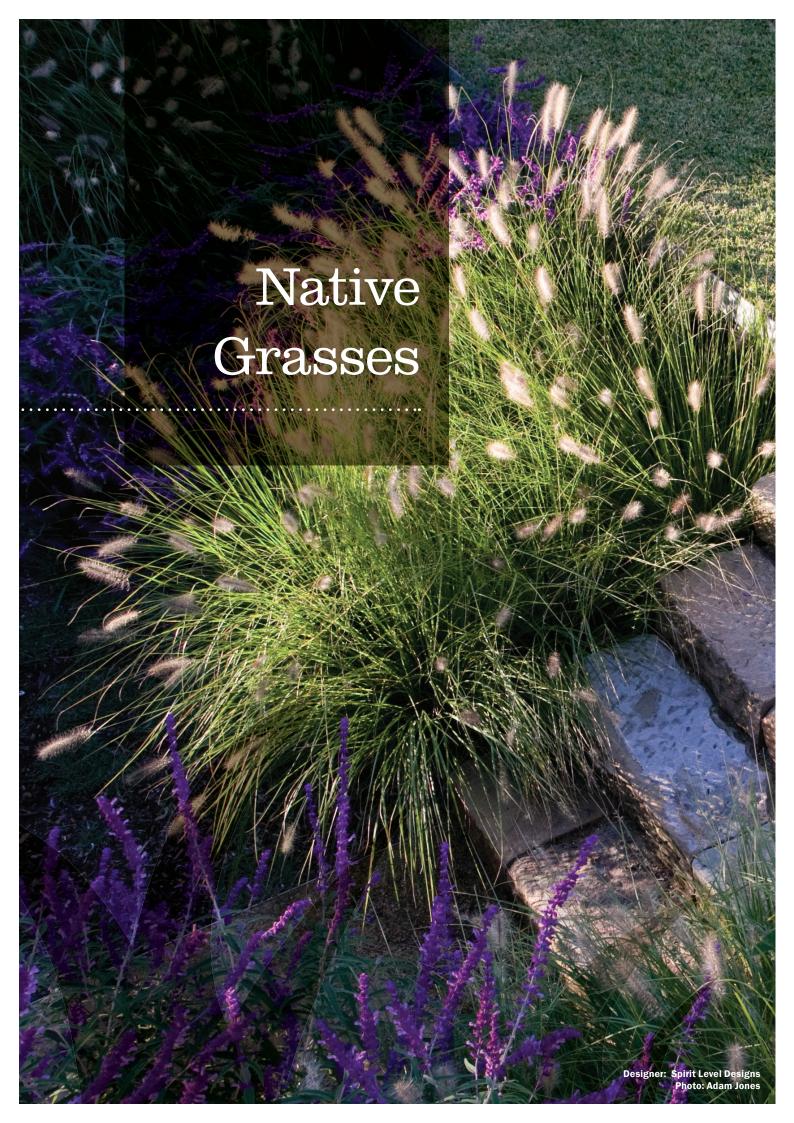

FUNCTIONAL Groundcover, borders and mass planted, the

welcome flowers brighten a late summer garden.

RELIABLE Clean foliage requires only minimal maintenance

once a year.

Description	Pink flowering Liriope; compact, variegated foliage
Density	10-16 plants per m² 4-8 per linear metre
Height & Width	25cm x 25cm
Flowering	January-February
Best Planting Time	March-October
Uses	Borders, mass plantings or as a groundcover
Position	Full sun to heavy shade Tolerates frost, drought & humidity
Soil Type	All soil types
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in spring; remove discoloured foliage as required; if in a colder climate cut back to the ground every year
Where It Works	VIC, NSW, ACT, QLD, SA, WA, TAS & NT

$Kingsdale^{TM}$

Poa poiformis 'PP500' (D

Indigenous grasses evoke a true sense of place in an Australian designed landscape. Kingsdale™ Poa was one of the earliest commercially released grasses to really capture the imaginations of landscape architects and designers. The fine, blue-hued clumping tussock grass with arching foliage, softens the landscape. Either planted en masse, in clumps for contrast or under trees at the lawn edge, creating a seamless transition from the domesticated garden to the more wild borders beyond. It's a popular choice today for a more lighthanded, organic design ethos that closely imitates nature. A consistent performer, highly regarded as a landscape mainstay for over 15 years.

NO FUSS Salt and wind tolerant, low growing form, small flowers, held above the foliage, add 10cm to its height and catch the wind

in spring.

FUNCTIONAL Excellent erosion control on slopes, exposed sites, in coastal

climates and mass planted in commercial landscapes.

RELIABLE Well suited to Victoria's climate. Tolerates most soil types.

	, , , , , , , , , , , , , , , , , , , ,
Description	Fine, blue arching leaves
Density	4-10 plants per m ² 2-4 per linear metre
Height & Width	45cm x 45cm
Flowering	N/A
Best Planting Time	March-October
Uses	Ideal for mass plantings or as a border; tolerates exposed areas
Position	Full sun to part shade; Tolerates frost & drought
Soil Type	Wide variety of soils
Care	Water as required for 8–13 weeks until established; cut back annually to 15cm above the ground in autumn or late winter; use slow release fertiliser in spring and/or autumn
Where It Works	VIC, NSW, ACT, TAS, SA, WA & QLD (only for non humid regions like Toowoomba with some shade)

Nafray®

Pennisetum alopecuroides 'PA300' (D

A showy, compact native grass with fine foliage and wispy cream to dusty pink flowerheads from summer to autumn. Enjoyed for its changing seasonal displays and enduring anything the climate throws at it. Its glaucous-green coloured foliage, lower height and its reliability in mass planting, has made it a popular choice in landscape design for over 15 years. Like any native grass, Nafray® Pennisetum planted in a pattern, be it straight, wavy, circular or diagonoal, brings a dynamism and rhythm to the landscape. The addition of other species to those patterns is highlighted through their contrasting foliage.

NO FUSS Compact and clumping, generally long-lived, responds

brilliantly to pruning.

FUNCTIONAL Contemporary, ornamental element in gravel gardens, on

slopes, mass planted, commercial designs, roadsides and

RELIABLE Australian native with lower seed set, making it a better

choice near bushland.

Description	Compact, clumping native grass
Density	4-10 plants per m ² 2-3 per linear metre
Height & Width	60cm x 60cm
Flowering	February-May
Best Planting Time	March-October
Uses	Mass planting for borders, rockeries and roadsides
Position	Full sun to part shade Tolerates frost & drought
Soil Type	Sandy to heavy clay soils
Care	Water as required for 8–13 weeks until established; trim 1/3 the size annually in May–Aug or as required; mulch well; use slow release fertiliser in late winter
Where It Works	VIC, NSW, ACT, QLD, SA, WA & TAS

NOTE: DO not get this native Australian Pennisetum alopecuroides confused with the invasive African variety (P. setaceum). The native Australian varieties have a much wider plume than the exotic variety and are non-invasive, making them a safer choice. In ideal conditions this variety has the possibility to regenerate from seed (eg. Northern NSW/QLD in warm/wet winters, wet areas and excessively irrigated gardens). It is not an invasive weed, however if you experience these conditions and prefer to avoid regeneration, remove spent flowerheads as required and dispose of correctly.

Purple Lea®

Pennisetum alopecuroides 'PA400' (

The arching, narrow foliage in blue-green tones, complements the pale purple flower heads when they are in bloom. Often seen in mass plantings, on hills or mounds, the purple tones of the Pennisetum's feathery flowerheads please a multitude of senses as they catch the wind. Fast to establish, giving a new landscaped area a sense of place relatively quickly.

NO FUSS This showy, clumping perennial does well in full sun to part

shade, while tolerating a wide variety of soils in drought and

frost conditions.

FUNCTIONAL Mass plantings or used as an accent, in borders, commercial

and roadside plantings, rockeries, native or low-maintenance

gardens.

RELIABLE Flowerheads attract birds and other pollinators from February

to May, this lower seeding variety makes it safe to use near

bushland.

Description	Showy, clumping perennial
Density	2-6 plants per m ² 1-2 per linear metre
Height & Width	80-90cm x 80-90cm
Flowering	Purple flowerheads from February–May
Best Planting Time	March-October
Uses	Mass or accent plantings for borders, rockeries and low maintenance gardens
Position	Full sun to part shade Tolerates frost & drought
Soil Type	Sandy to heavy clay soils
Care	Water as required for 8–13 weeks until established; trim 1/3 the size annually in May–August or as required; remove spent flower heads as required, dispose of correctly if in a warmer climate or wet area; mulch well; use slow release fertiliser in late winter
Where It Works	VIC, NSW, ACT, QLD, SA, WA & TAS

Velvet Kangaroo Paw Range

A range of iconic Kangaroo Paws bred with bold vibrant flowers and better disease resistance that require less maintenance.

All the plants in the Velvet Kangaroo Paw Range have deep green, strappy, clump-forming foliage and notably good resistance to black spot. The velvet-like flowers are held high above the foliage from the end of winter through to autumn. The iconic blooms bring an Aussie bush and sunset-hued colour range to mass plantings and residential or commercial contemporary gardens. Excellent contrast to other textured foliage when included in on-trend meadow planting palettes. These bird attracting plants are also well suited to rockeries, narrow garden beds, as potted specimens and accent plants.

NO FUSS

Less maintenance required to trim and remove old leaves, compared to other Kangaroo Paw cultivars.

FUNCTIONAL

Good weed suppression if planted densely with same species or alternatively in combination with ultra-low maintenance strappy plant like Dianella or Lomandra.

RELIABLE

Thrives in free-draining soil. Tough and resistant to frost and drought. Perform better on the east coast than other Kangaroo Paws.

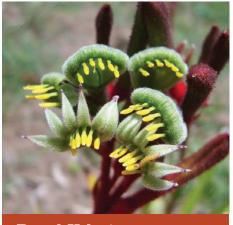

- Kangaroo Paws Range • Deep chunky mulch to 75mm around each plant. Using mulch containing little or no fines will result in reduced
- Lomandra or Dianella plantings in the foreground hide any untidy foliage

weed germination

 Spot planted throughout mass planted strappy plants like Lomandra or Dianella provide interesting, undulating colour pops while relying on the weed suppression qualities of the other species.

Regal Velvet

Anigozanthos hybrid 'Regal Velvet' (

Description	Mid-sized Kangaroo Paw
Density	3-5 plants per m ²
	2–3 per linear metre
Height & Width	50cm x 40cm
Flowering	Red/green flowers from Aug-May
Best Planting Time	March-November
Uses	Mass planting, planter boxes, flowering garden specimens
Position	Full sun open position Tolerates frost & drought
Soil Type	Well drained soils
Care	Remove older flower stems; fertilise annually
Where it Works	VIC, NSW, ACT, TAS, SA, WA & QLD (in northern QLD it is shorter lived, approx. 2-3yrs — south it is longer term)

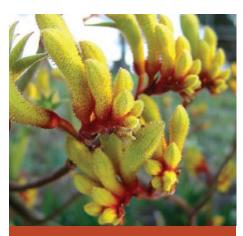

Ruby VelvetTM Anigozanthos hybrid

Luscious®

Tristaniopsis laurina 'DOW10' (D

With glossy broad leaves, attractive bark and perfumed flowers, Luscious® Tristaniopsis is an elegant native tree for the street, park or residential garden. It has seen consistent, increasing demand by landscape professionals since its launch. Adds formaility when used as a tall screening layer and useful in defining boundaries. Its dense, lush green foliage has seen it regularly used as a native alternative to exotic dwarf forms of Magnolia grandiflora. The striking bark adds to its vibrant beauty when used as an accent or ornamental shade tree in a smaller garden.

NO FUSS Highly Myrtle Rust resistant. Performs well in soils ranging

from rocky to heavy clay loam.

FUNCTIONAL Shade, street and specimen tree, dense hedge or canopy level

in a layered contemporary garden providing instant privacy.

RELIABLE Best performance in moist positions for establishment,

will tolerate frosts and drought.

OZBREED EXTRA Red juvenile growth and yellow perfumed flowers add

seasonal interest to the landscape.

Description	Lush and dense form
Density	1 plant per 2–6 m ² 1 per 3–5 linear metres
Height & Width	7–12m x 5m
Flowering	Flowers are yellow with sweet perfume from November- December
Best Planting Time	March-October
Uses	Street planting, parks & ovals, home gardens
Position	Full sun to part shade; Tolerates frost & drought
Soil Type	Tolerates a wide range of soils; best in warm moist position
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in spring if required
Where it Works	VIC, QLD, NSW, SA & WA

$\mathbf{Pinnacle}^{\mathrm{TM}}$

Syzygium australe 'AATS' (D

For shrinking backyards and tight spaces, this narrow-growing, native Lilly Pilly forms a screen or dense hedge without taking up valuable real estate. Fully trainable, great topiary candidate, can be left unpruned for up to three years and will stay tidy. Maintain at a height of 2m with regular pruning.

NO FUSS From full sun to partial shade, Pinnacle™ Syzygium

naturally maintains a compact, architectural shape.

FUNCTIONAL Hedge or screening plant in slim garden beds next to

boundary fences, driveways and other tight spaces

or perfect for topiary sculpting.

RELIABLE The bright glossy deep-green foliage contrasts against the edible pink fruit, which comes after

against the edible pink fruit, which comes afte the white flowers in spring or early summer.

Description	Neat, narrow Lilly Pilly
Density	1 plant per 1–2m² 1–1.5 per liner metre
Height & Width	6-10m x 1-1.5m
Flowering	White flowers from Nov-Dec
Best Planting Time	March-November
Uses	Tight planting zones, along fences & driveways
Position	Full sun to part shade Tolerates drought & cold
Soil Type	Moist, well drained soils
Care	Water as required for 8–13 weeks until established; be aware of Psyllid (using Yates confidor tablets yearly is recommended); prune yearly for a tidy hedge or every 2–3 years as a screen plant
Where it Works	VIC, QLD, NSW, SA & WA

SublimeTM

Acmena smithii 'DOW30' (D

A Lilly Pilly that attains small tree stature at 5m, but maintains dense foliage coverage all the way to the ground. Young, lime green growth, matures to a glossy mid-green. Can be crown-lifted to allow underplanting or maintained to utilise as a privacy hedge or screen. Highly Myrtle Rust and Psyllid resistant, this vigorous evergreen native responds well to pruning.

NO FUSS Attractive lime-coloured new growth and extremely

psyllid resistant, drought and frost tough.

FUNCTIONAL Screening, hedges, topiary and street tree or accent

planting in smaller gardens in a range of climate

zones from the coast to inland.

RELIABLE White fluffy flowers in spring in a wide range of

soil types.

PodiumTM

Ficus brachypoda 'BWNPOD' (D

The umbrella-like canopy of this native, evergreen Ficus provides bountiful shade in parklands or larger residential spaces. Bred to develop a uniform central trunk with vase-shaped branching when fully grown, lending it formidable presence and flexibility in high winds. No aerial roots and smaller fruit than the common form means less mess for surrounding paths.

NO FUSS Drought tolerant and moderately frost tolerant once

established. **FUNCTIONAL**

A compact shade tree for parks, as an accent in large gardens or wide street scapes.

RELIABLE Smooth grey bark and glossy green leaves year-round.

RELIABLE SITIO	idi grey bark and giossy green leaves year-round.
Description	Compact, domed Ficus tree
Density	1 per 8-10 linear metres
Height & Width	6-9m x 6-9m
Flowering	Flowering is insignificant; low fruiting spring to early summer
Best Planting Time	Anytime, optimum in spring for cooler climates
Uses	Residential and commercial landscapes, shade tree, streetscapes, parks and for large containers
Position	Full sun to part shade; tolerates drought, light frost and windy conditions
Soil Type	Most soil types, avoid wet feet
Care	Water as required for 8–13 weeks until established; top up water in first summer if required; protect from frost in first winter when young; plant in a well mulched garden (chunky mulch is recommended); if required use slow release fertiliser in spring; responds well to pruning if required
Where it Works	VIC, QLD, Northern NSW, Central NSW, NT; more cold tolerance testing needed for Southern NSW, SA & WA

Sweeper®

Waterhousea floribunda 'DOW20' (D

Sweeper® Waterhousea takes the lush, soothing visual effects of a common Waterhousea floribunda and improves on it with its heavily weeping form and more dense, rippled foliage. Its formidable size and deep green tones bring a cooling, softening effect to dense urban areas where heat islands can be created due to large amounts of paving.

NO FUSS Thrives in full sun to part shade in a wide variety

of soil types.

FUNCTIONAL Medium to large, dense screening tree or hedge,

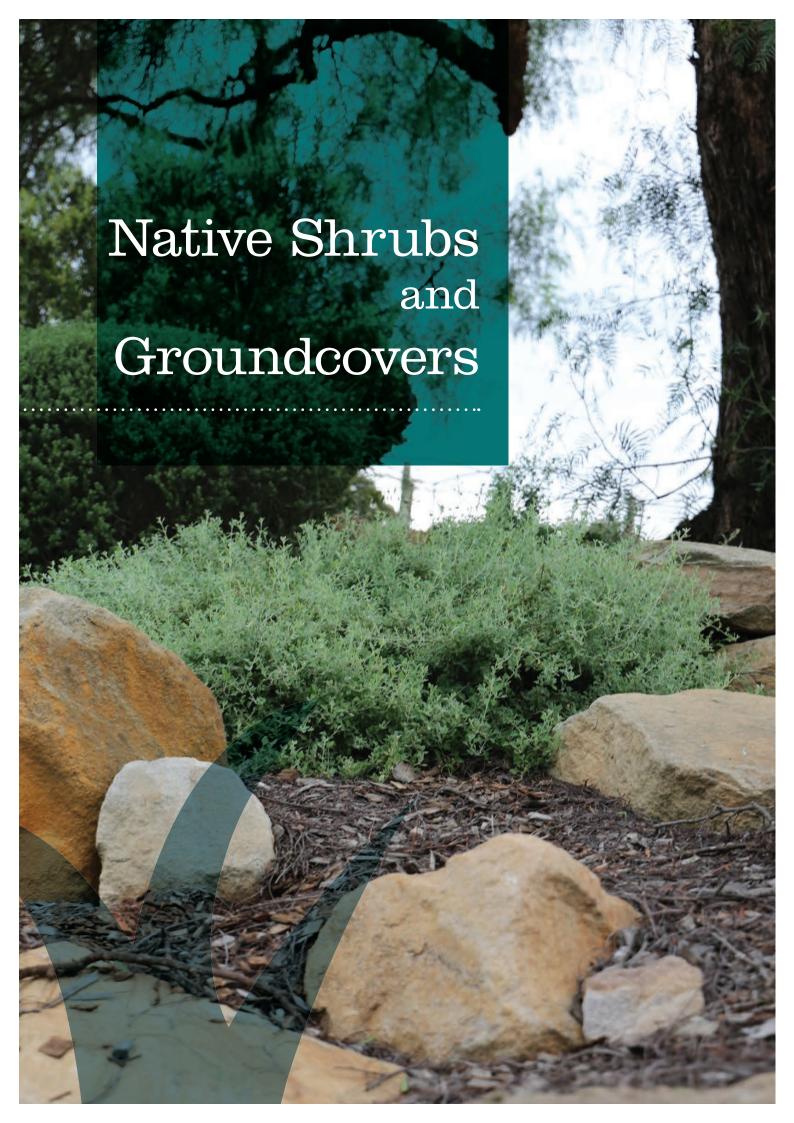

street tree or feature tree in parklands or larger

residential gardens.

RELIABLE Large clusters of white flowers bloom in summer.

High resistance to Myrtle Rust in Ozbreed trials.

Description	Weeping habit with lush, green new growth
Density	1 plant per 2-6 m ² 1 per 3-8 linear metres
Height & Width	10m x 5-8m
Flowering	White flowers from Nov-Dec
Best Planting Time	March-October
Uses	Street tree, large screen or hedge
Position	Full sun to part shade; Avoid hot, dry exposed areas; Tolerates drought & cold
Soil Type	Well drained to heavy clay loams
Care	Water as needed for 8–13 weeks until established; trim every 2–3 years if required
Where it Works	VIC, QLD, NSW, SA & WA

Straight and NarrowTM

Syzygium australe 'SAN01' (

Slender and naturally psyllid-resistant, this semi-compact Lilly Pilly is a great addition to contemporary, formal landscapes or narrow spaces. Naturally fastigiate form takes up minimal garden bed real estate, while providing privacy with dense, vigorous vertical growth. Completely block out unsightly views in tight garden beds or borders with this screening Lilly Pilly.

NO FUSS In sun or partial shade, tolerates cold and drought.

FUNCTIONAL Hedge or screen in the tightest of spaces, line a driveway or

perimeter fence.

RELIABLE Sculptural in habit, regular pruning increases foliage density

and accentuates natural form. White spring flower makes way

for pink pendulous fruit.

OZBREED EXTRA Well-suited to topiary, will naturally grow 5-8m high, prune to

maintain at 2m for dense privacy screen.

Description	Fastigiate, semi-compact Lilly Pilly
Density	1 plant per 1–2m² 1–1.5 per liner metre
Height & Width	5-8m x 1-1.5m
Flowering	White flowers from Nov-Dec
Best Planting Time	March-November
Uses	Perfect for constricted planting areas (fences and driveways), works well for topiary
Position	Full sun to shade Tolerates cold and dry
Soil Type	Suits moist, well drained soils
Care	Natural Psyllid resistance makes it unlikely to have this problem; water as required for 8–13 weeks until established; plant in a well mulched garden (chunky mulch is recommended); if required use slow release fertiliser in spring; prune twice yearly for a very tidy hedge or every 2–3 years as a wider screen plant
Where it Works	VIC, QLD, NSW, SA, WA & ACT (if protected from frosts)

Aussie RamblerTM

Carpobrotus glaucescens 'CAR10' (D

A succulent, native groundcover that spills over sloping sites or balcony garden edges. The huge, pink flowers in spring and autumn attract pollinators and complement the purple stems and glaucous foliage of this vigourous, hardy plant. Thick, dense matt-like coverage growing up to 2m wide, suppresses weeds and is quick to grow back when damaged.

NO FUSS Tolerates humidity, frost and cold as low as minus 6°C or colder, far better than the common form of Pigface.

FUNCTIONAL Groundcover suited to erosion control and dune

stabilisation, sloping sites, flower gardens, rockeries,

borders and mass planting.

RELIABLE Copes well planted inland in heavier soils and

front-line salt tolerant in coastal situations.

Description	Native spreading groundcover
Density	1–2 plants per m²
Height & Width	20cm x 2m
Flowering	Large pink flowers from Sep-May
Best Planting Time	March-November
Uses	Groundcover for coastal & inland plantings
Position	Full sun to light shade Tolerates drought, humidity & frost
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; prune if ever required
Where it Works	VIC, QLD (not yet tested in northern QLD), NSW, ACT, TAS, SA & WA

Eremophila glabra prostrate 'EREM1' (D

Tidy, blue-grey undulating groundcover, adds dense, contrasting texture in mixed plantings in Mediterranean or native-style residential and commercial gardens. Spreads cloud-like, over rockeries and in garden beds, or when mass planted on verges or roadsides. The yellow flower with faint orange markings, brings warm, copper tones to the landscape in winter.

NO FUSS Loves the east coast. Tolerates drought and heavier soils in drier climates, in full sun to light shade.

FUNCTIONAL Mass planted, mounding groundcover, border planting, mixed plantings in Mediterranean style

gardens.

RELIABLE The short internodes of Blue Horizon™ Eremophila creates a more compact plant with tidier coverage

and more density than common varieties.

Density
Density
1–2 plants per m²
1–2 per linear metre

Height & Width
Flowering
Best Planting Time
Uses
Position

Profere froe designing but can bandle beavior seils.

Soil Type Prefers free draining, but can handle heavier soils in drier climates

Care Water as required for 8–13 weeks until established; for a more manicured look prune in autumn or spring every 2–3 years

Where it Works VIC, SA, WA, Sydney and Southern NSW

Callistemon viminalis 'CV01' (D

A heavy flowering Callistemon for tight boundaries, thin garden beds or the ever-shrinking backyard, creating complete privacy or screening unsightly neighbouring views. Attracting birds, bees and other pollinators to the garden in spring when covered in masses of red Bottlebrush flowers.

With little pruning $\operatorname{Slim}^{\mathsf{TM}}$ Callistemon maintains its shape, NO FUSS

without encroaching on limited space in a small area.

FUNCTIONAL Screen, hedge or windbreak to 3m high, in a pot or as a

feature tree in a tight corner.

RELIABLE Takes to any harsh environment, performing well in extended

wet periods or drought.

OZBREED EXTRA Foliage is held on the plant all the way to the ground for a

uniform hedge with no gaps and complete privacy.

Narrow, slimline Callistemon
1-3 plants per m² 1-1.5 per linear metre
3m x 1.3m
Red flowers from Sep-Nov
March-October
Screen, hedge or feature for tight planting areas
Full sun to part shade Tolerates drought & frost
Most soil types
Water as required for 8–13 weeks until established; prune to shape 1–3 times a year after flowering if desired
VIC, QLD, NSW, ACT, TAS, SA & WA

Cherry ClusterTM

Grevillea rhyolitica x juniperina 'TWD01' (b

This hardy, compact and naturally low-growing Grevillea lights up the winter landscape. Its cherry-red flowers continue to bloom like fireworks into spring with spot flowering throughout the year. Tolerant of drought and heat conditions as well as frost tolerant in soils pH7 and under.

NO FUSS The Grevillea rhyolitica gives it the wider leaf form, while Grevillea juniperina gives Cherry Cluster™

Grevillea its groundcover habit.

FUNCTIONAL Low hedge, groundcover, spilling over rockeries,

mass planted and native gardens.

RELIABLE Thrives in temperate or hot and dry climates.

Frost and cold tolerant to -5 degrees Celsius.

Frost and cold tolerant to -5 degrees Ceisius.	
Description	Tough groundcover
Density	2-3 plants per m² 1.5-2 plants per linear metre
Height & Width	50cm x 80cm
Flowering	Attractive red flowers from Mar-Nov
Best Planting Time	March-November
Uses	Mass planting, native gardens and rockeries
Position	Full sun to part shade; tolerates drought & frost
Soil Type	Well drained soils, pH below 7
Care	Water as required for 8–13 weeks until established; prune if required every 2–3 years; use a native or slow release fertiliser sparingly
Where it Works	VIC, ACT, TAS, SA, WA, NSW (best suited Sydney and south, will work in some parts of Northern NSW) & parts of South East QLD (non humid regions like Toowoomba)

Coastal PinkTM

Correa alba 'COR10' (D

In native or Mediterranean-style landscapes, the delicate, rounded leaf adds to the textural contrast in the shrub layer. Branches boast the attractive bronze tones of Correa alba, while its dark green foliage is complemented by the light pink bell-shaped flowers that set it apart from the common Correa alba form.

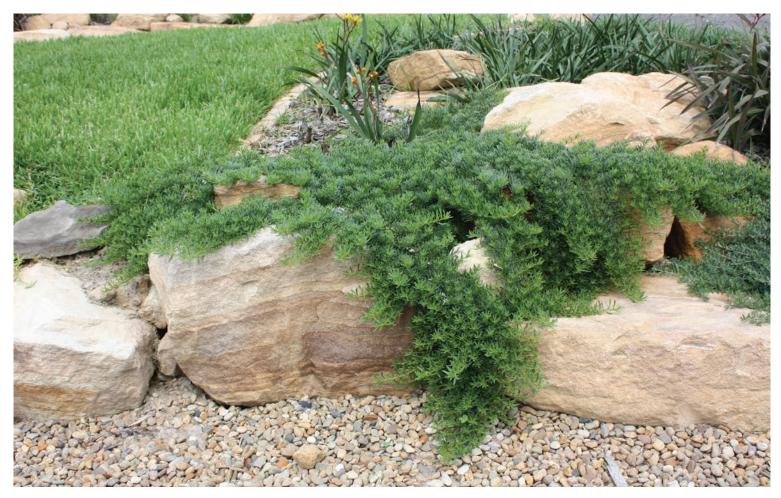

NO FUSS Copes well in windy and coastal sites with good

salt tolerance.

FUNCTIONAL Bird attracting, native or Mediterranean landscapes,

hedging.

RELIABLE Excellent deep green shrub layer planting with contrasting foliage.	
Description	Medium coastal shrub
Density	1-2 plants per m ² 1-2 plants per linear metre
Height & Width	2m x 2m; can be pruned twice a year to keep it at a smaller size
Flowering	Light pink bells in winter/early spring
Best Planting Time	Autumn, winter or spring
Uses	Coastal, bird attracting, shrub layer between trees, mass planted as a medium sized shrub or as a small to fence-sized hedge
Position	Full sun to light shade. Tolerates drought & frost
Soil Type	Preferably reasonably drained soil, however it is adaptable to most soil types
Care	Low water requirements once established; prune once per year to maintain semi-compact habit or twice per year for a really tidy appearance; prune to desired shape and fertilise with slow release native fertiliser
Where it Works	VIC, ACT, SA, WA, TAS, Southern NSW and Sydney (in good draining soils)

\mathbf{Y} areen $\mathbf{a}^{ ext{TM}}$

Myoporum parvifolium 'PARV01' (D

A native, drought tolerant groundcover, loved by the landscaping industry for its long-lived, spilling form that follows the contours of garden beds and balconies. As a groundcover, or draping itself over rockeries and pot ledges, the deep green foliage of this Myoporum looks like a lush carpet. Its longlived, thick matting ability make it a notable weed suppressant. Yareena™ Myoporum is frost resistant and stays clean in full sun to part shade. Hardy in a wide variety of soils.

NO FUSS Stays low and spills over walls, low planters and borders.

FUNCTIONAL Low groundcover for coastal and inland positions, rooftops,

attractive specimen plant for weed suppression, sloping sites

or in rockeries.

RELIABLE Longer-lived variety due to its thick, woody stems and larger

leaf than common fine-leaved Myoporum.

OZBREED EXTRA A brilliant, low maintenance groundcover with textural contrast

when planted around strappy plants and broad leaved shrubs

in a mixed planting.

Description	Crisp, clean, longer lived Myoporum
Density	1-2 plants per m ² 1-1.5 plants per linear metre
Height & Width	10cm x 1m
Flowering	White flowers from Oct-March
Best Planting Time	March-November
Uses	Excellent groundcover, good for coastal positions
Position	Full sun to part shade; tolerates drought & frost
Soil Type	Sandy to heavy clay soils
Care	Water as required for 8–13 weeks until established; plant in a well mulched garden; prune once every two years to keep tidy
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Grevillea rosmarinifolia 'H16' (D

Naturally bun-shaped, this small-bird attracting Grevillea makes a perfect hedge or low border. Flowers prolifically in winter and spring, the crimson blooms contrast against the emerald green, lace-like foliage. Prune annually to maintain a tidier form. Best suited to temperate and hot/dry climates.

NO FUSS Durable and tough in drought and frost, cold hardy

for all areas of Victoria except Alpine.

FUNCTIONAL Informal or formal hedging plant, mass planting,

rockeries, Mediterranean or native style landscapes.

RELIABLE Fine, lace-like foliage and dense branching habit

resulting in a more compact plant.

Description	Tough, compact shrub
Density	1–2 plants per m² 1–1.5 per linear metre
Height & Width	80cm x 80cm
Flowering	Masses of crimson flowers from August-November
Best Planting Time	March-November
Uses	Mass planting, native gardens and rockeries
Position	Full sun to light shade Tolerates drought, humidity & frost
Soil Type	Well drained soils
Care	Water as required for 8–13 weeks until established; prune every two years or annually for best performance; use slow release fertiliser annually
Where it Works	VIC, NSW, ACT, TAS, SA, WA & parts of South East QLD

A dense, ground-hugging Grevillea that gets covered in golden hued, spider-like flowers from winter, well into spring. The spilling habit is well suited to embankments and sloping sites with moderate humidity and soils that are pH 7 and under. Tolerant of cold as well as hot, dry conditions.

NO FUSS Less fussy than most grevilleas, benefits from a

prune every couple of years to keep tidy.

FUNCTIONAL Groundcover, weed suppression due to its density

and coverage, rockeries, native or Mediterranean

style and pollinator attracting gardens.

RELIABLE Holds flowers for extended periods and will grow to

half the size of the popular Grevillea 'Molongo'.

Description	Low growing groundcover
Density	1–2 plants per m² 1.5–2 plants per linear metre
Height & Width	30cm x 80cm-1m
Flowering	Gold-yellow flowers from Jul-Sep
Best Planting Time	March-November
Uses	Groundcover, specimen planting
Position	Full sun to part shade Tolerates drought & cold
Soil Type	pH below 7, free draining to moderately heavy
Care	Water as required for 8–13 weeks until established; prune every 2–3 years if required; use a native slow release fertiliser sparingly
Where it Works	VIC, NSW (Sydney and south), ACT, TAS, SA & WA

Aussie Flat BushTM

Rhagodia spinescens 'SAB01' (D

Compact and low-growing, this native saltbush is found growing naturally in every mainland Australian state. The eye-catching, grey-blue foliage suits large-scale landscaped areas requiring weed suppression and groundcover or native and Mediterranean landscape styles. The undulating & sculptural habit and small leaf makes it the perfect plant for cloud pruning. Prune hard at the end of winter and be rewarded with vigorous spring growth.

NO FUSS Aussie Flat Bush™ Rhagodia maintains its shape with little or

no maintenance. More formal and shapely with pruning,

FUNCTIONAL Dry slopes, bushfire prone areas, roadsides and residential

gardens or landscaped public areas.

RELIABLE Takes to any harsh environment – naturalised in all mainland

states and territories, adapted to both inland and coastal

conditions.

OZBREED EXTRA Eye catching foliage and form both mass planted or when

used as an accent plant.

Description	Low growing groundcover/shrub
Density	1–2 plants per m² 1–2 plants per linear metre
Height & Width	30-50cm x 1m
Flowering	Rarely flowers
Best Planting Time	All year
Uses	Groundcover, mass planting, garden plant
Position	Full sun to light shade Tolerates drought & frost
Soil Type	Most soil types including heavy soils
Care	Water as required for 8–13 weeks until established; in gardens prune twice per year for best look; infrequent pruning on road sides
Where it Works	VIC, NSW, ACT, QLD (non humid inland areas), SA, WA

Green JohnTM

Callistemon viminalis 'LJ23' (D

The lime green of its new growth is what gives this small shrubby Callistemon its name. A textural and colour contrast with other mounding shrubs in the landscape. The red Bottlebrush flowers bloom in spring. Shorter and tidier than the older Little John™ Callistemon form.

NO FUSS Dense habit is accentuated with pruning but not necessary. Pruning will encourage growth and

assist in gaining maximum height performance. FUNCTIONAL Accent, low hedge or mounding plant in layered

landscape plantings. Bio-retention swales and

roadside plantings.

RELIABLE Tough and hardy, Green John™ Callistemon is suited

to drought conditions and frosty climates. Varied

soils from sandy to clay-loam.

Description	Native shrub with green foliage
Density	3-6 plants per m ² 2-2.5 per linear metre
Height & Width	60cm-1m x 60cm
Flowering	Red flowers from Sep-Nov
Best Planting Time	March-October
Uses	Specimen plant, bio-retention swales, shrub layer
Position	Full sun to part shade; drought & cold tolerant
Soil Type	Sandy to well drained soils
Care	Water as needed for 8–13 weeks until established; prune as required every 2–4 years
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Callistemon viminalis 'LC01' (D

Macarthur™ Callistemon is a tidy, mid-sized shrub that can be used to great effect as a backbone plant in a layered landscape. Densely foliaged with fresh green tones, its large bright red blooms bring floral interest and pollinators to the yard in spring. Spot flowering throughout the rest of the year. Resistant to Myrtle Rust.

NO FUSS This 'Little John' - 'Captain Cook' cross is naturally tight and bun-shaped, needing a prune every 4 or 5

years to maintain preferred size.

FUNCTIONAL Fits into the small shrub, horizontal layer, as a

malleable background shrub in native, bird-attracting

residential or commercial designs.

RELIABLE Mid-sized mass flowering Callistemon boasts profuse

flowering in humid hot dry conditions as well as frost

tolerant.

Description	More compact, better flowering Callistemon; bushy growth habit
Density	1–2 plants per m² 1–1.5 per linear metre
Height & Width	1.8m x 1.5m
Flowering	Red flowers from Sep-Nov
Best Planting Time	March-October
Uses	Medium sized shrub
Position	Full sun to part shade. Tolerates drought & frost
Soil Type	Tolerates most soil conditons
Care	Water as required for 8–13 weeks until established; prune to shape 1–3 times a year after flowering for a hedge
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Better JohnTM

Callistemon viminalis 'LJ1' (

The contrasting iridescent blue-green mature foliage, and its speed to establish and grow, are traits that make Callistemon Better John™ superior to its parent 'Little John' Callistemon. Abundant red Bottlebrush flowers attract birds, butterflies and bees in spring.

NO FUSS Tolerates sun, shade and drought or frost conditions, clay to

free draining soils, periodic wet feet or heavy drought.

FUNCTIONAL Mass planting, roadsides, mounded clumps, low-shrub layer plantings, bio-retention swales, hedges and windbreaks.

RELIABLE A tidier and more-dense hedge will be established with regular

pruning but can be left after establishment and only pruned

every few years.

OZBREED EXTRA The soft, hairy texture of the new growth creates a muted

silvery contrast in the landscape. The saturated red blooms

pop against the foliage in spring.

Description	Native shrub with blue-green foliage
Density	3-5 plants per m ² 1.5-2 per linear metre
Height & Width	60cm-1.2m x 60cm-90cm
Flowering	Red flowers from Sep-Nov
Best Planting Time	March-October
Uses	Specimen plant, contrast plant
Position	Full sun to part shade; drought tolerant
Soil Type	Sandy to well drained soils
Care	Water as required for 8–13 weeks until established; prune every 3–4 yrs for a natural shape if required, or every 2 yrs for a tidy hedge
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Callistemon viminalis 'CC19' (D

A dense, compact Callistemon boasting young foliage with a rust-red tone, followed by masses of red, Bottlebrush flowers. This Captain Cook Callistemon selection contributes a colourful display over many months thanks to its fine, hairy juvenile leaves and flower display. A formal hedge or screening plant that attracts birds, bees and butterflies to the garden.

NO FUSS A yearly prune keeps this medium-size hedge or

screen tidy, while encouraging new growth.

FUNCTIONAL Informal hedge or pruned for more formality,

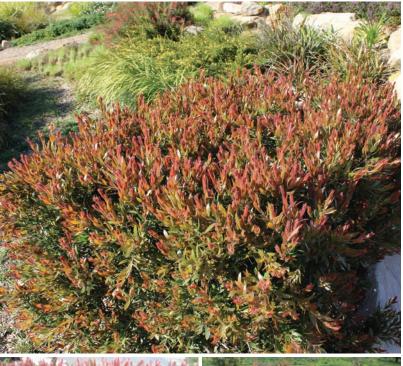

screening unattractive views and creating privacy.

RELIABLE A drought tolerant, self-cleaning Callistemon which

loses its spent flowers quickly, maintaining a dense

and tidy hedge.

and day neage.	
Description	Dwarf, compact fine leaf Callistemon with subtle new growth
Density	1–3 plants per m² 1–2 per linear metre
Height & Width	60cm-1.5m x 60cm-1m depending on conditions
Flowering	Red flowers from Sep-Nov
Best Planting Time	March-October
Uses	Hedge, specimen shrub
Position	Full sun to part shade; drought tolerant
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; prune to shape 1–2 times a year after flowering for a tidy hedge or every 2–3 years for a natural shape
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

$Red Alert^{TM}$

Callistemon viminalis 'KPS38' (b

Burgundy-red young growth makes Red Alert™ Callistemon the native answer to exotic Photinia. A compact bottle brush for hedging or screening, creates privacy and interest with vibrant red and fluffy new growth in spring and autumn. Rarely flowers, so won't attract bees. Stands up to wind, cold and light frost.

NO FUSS Drought and poor soil tolerant, prune annually to suit

the height individually required in the garden.

FUNCTIONAL Hedge, privacy screen or feature plant, low flower

count so less pollen makes it perfect for low allergen,

or kid-friendly gardens.

RELIABLE It thrives in gardens situated in Australian climatic

extremes.

Description	Red new growth foliage; compact form
Density	1–2 plants per m² 1–2 per linear metre
Height & Width	2-2.4m x 1.5-2m unpruned; 60cm-2m x 50cm-1.5m pruned
Flowering	Rarely, if ever flowers
Best Planting Time	March-October
Uses	Hedge, specimen shrub
Position	Full sun to part shade Tolerates drought & frost
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; prune to shape 1–3 times a year after red new growth foliage for a tidy hedge
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Flat WhiteTM formerly known as Slender Bells WhiteTM Pandorea jasminoides 'PJ01' (

A native plant, with a habit like Flat Mat™ Trachelospermum jasminoides. Flat White™ Pandorea jasminoides is the native groundcover of choice for roundabout and roadside line-of-sight plantings and where weed suppression is vital. Unlike common Pandorea that tend to be leggy and vigorous only at the top of the plant, Flat White™ Pandorea is selected for its natural foliage density at ground level when used as a climber. Trained up a trellis, its instinct is to grow slim and vertically. When left to spread, Flat White™ Pandorea will stay low and flat, only needing pruning once or twice a year. Tolerant of drought and moderate frost, the beautiful white flowers in the warmer months add interest in sun or part shade.

NO FUSS The abundant white, bell-shaped flowers on this native appear during spring and summer in full sun to part shade.

FUNCTIONAL Flat White $\ensuremath{^{\text{TM}}}$ Pandorea is a vigorous, evergreen and lush

groundcover, with dense branching and foliage to suppress weeds and in roadside applications, bedding plant or mass

planting. Utilise as a climber to hide ugly views.

RELIABLE As reliable a choice as Star Jasmine when specified either as

a climber or a groundcover. Evergreen dense foliage coverage from the ground up and attractive flower flushes during the

warmer months.

Description	More dense, compact climber or groundcover
Density	1–2 plants per m ² 1–3 per linear metre
Height & Width	2-3m x 40-60cm pruned; 80cm-2m wide unpruned
Flowering	Pure white flowers from late spring to summer
Best Planting Time	March-November
Uses	A climber for covering fences and trellises, ideal for narrow spaces A spreading groundcover, to suppress weeds
Position	Full sun to part shade; Moderate frost tolerance, drought tolerant
Soil Type	Most soil types
Care	Water as required for 8–13 weeeks until established; prune a few months after planting; prune twice per year for a narrow tight climber
Where it Works	VIC, South QLD, NSW, TAS, SA & WA

Purple FusionTM

Scaevola humilis 'PFS100' (

Adorned with purple fan-shaped flowers almost year-round, this native groundcover remains low while spreading up to 1.5m wide in full sun to part shade. Purple Fusion™ Scaevola's smaller leaf makes it tougher in cold climates and drought conditions, requiring less irrigation. The cascading habit of this pretty perennial drapes itself beautifully over walls, containers and hanging baskets.

NO FUSS The non-mounding form requires no cutting back,

resulting in less maintenance.

FUNCTIONAL Mass groundcover, rockeries, raised planters,

hanging baskets and as a border planting to soften paving. Cottage style gardens or native landscapes.

RELIABLE Flatter and more compact than common Scaevola

aemula forms due to Scaevola humilis genealogy.

Description	Non-mounding groundcover
Density	1-2 plants per m ²
	1–2 per linear metre
Height & Width	20cm x 1.5m
Flowering	Small purple flowers from Sep-Dec and most
	other times of the year
Best Planting Time	March-November
Uses	Groundcover
Position	Sun to light shade;
	tolerates drought & frost
Soil Type	Most soil types
Care	Water as required for 8-13 weeks until
	established; trim once a year to keep tidy
Where it Works	VIC, QLD, NSW, TAS, SA & WA

MeemaTM

Hardenbergia violacea 'HB1' (D

A long-lasting, mounding Hardenbergia that grows in a shrubby form without climbing support, requiring less pruning. Sequential blooming extends Meema™ Hardenbergia's vibrant purple flowering season longer than common Hardenbergia forms, from late winter to early spring.

NO FUSS Hardy and vigorous, frost and drought tolerant.

FUNCTIONAL Versatile shrub, informal hedge, groundcover, container

plant and the toughest roadside Hardenbergia.

RELIABLE Tidy shrub forming climber, requiring an annual prune

to maintain dense shape, or pruned every 4 to 5 years on roadsides. Hide uneven levels or disguise unsightly areas with this evergreen native.

anoignal, areas mar and svergreen matter		
Description	Tidier, longer lived groundcover with a great shrubby form	
Density	1–3 plants per m ² 1–2 per linear metre	
Height & Width	50cm x 2m	
Flowering	Purple flowers from Jul-Sep	
Best Planting Time	March-October	
Uses	Great feature plant for gardens and landscapes	
Position	Full sun to semi shade; Tolerates drought & cold	
Soil Type	Sandy to heavy clay soils	
Care	Water as required for 8–13 weeks until established; prune once a year after flowering for a natural shape; prune 2–3 times a year for	

a naturai snape; prune 2-3 times a year foi

Where it Works VIC, QLD, NSW, ACT (survives in extreme cold, but will get some leaf burn), TAS, SA & WA

Westringia Range

A range of native, glaucous, tough Westringias that range in size - for every situation.

The Ozbreed Westringia range has taken a common native species and selected strains that suit every landscaping situation. Often proposed as the exotic Buxus alternative, Westringias stand on their own as ideal plants for our varied climate. Being native, the grey-blue hues complement our natural bushland and look right at home in commercial landscapes or residential gardens.

Blue GemTM

Westringia hybrid 'WES03' A()

Naturally mounding with profuse, vibrant lilac-blue flowers, blooms in spring and sporadically throughout the year. Blue Gem™ Westringia makes an eyecatching hedge or accent plant in a native or contemporary garden.

NO FUSS Tolerates all soils from well-drained clay to sandy, frost and

drought tolerant. **FUNCTIONAL** Native and pollinator friendly gardens, hedge, accent, or mass

planted in commercial or residential landscapes.

RELIABLE Pruning the bushy growth up to three times a year will create a

more dense, manicured plant.

Description	Shrubby Westringia
Density	1–3 plants per m ² 1–2 per linear metre
Height & Width	1-1.5m x 80cm-1.3m
Flowering	Bluish-purple flowers from Sep-May
Best Planting Time	March-November
Uses	Feature plant, mass plantings and native gardens
Position	Full sun to light shade. Tolerates drought & cold
Soil Type	Sandy to well drained clay soils
Care	Prune to shape as required after flowering
Where it Works	VIC, NSW, ACT, TAS, SA, WA and South East QLD (not suited to Northern QLD)

Low HorizonTM

Westringia fruticosa 'WES06' (

A dense, low growing groundcover that is covered in white flowers in spring. Low Horizon™ Westringia has a flat habit and short internodes that makes it Ozbreed's most compact and lowest maintenance Westringia.

NO FUSS Lowest maintenance groundcover. Occasional pruning will

result in increased density and better weed suppression.

FUNCTIONAL Groundcover, mass plantings around taller trees and shrubs,

native and cottage garden styles, containers, rockeries or

border planting.

RELIABLE In drought and colder climates, Low Horizon™ Westringia

tolerates the extremes of humidity and frost in a wide variety

of soil types.

OZBREED EXTRA Great foliage and textural contrast to other Westringias or

shrub layers in the garden.

Description	Tough, dense compact groundcover
Density	2–3 plants per m² 2-3 per linear metre
Height & Width	30cm x 70cm
Flowering	White flowers in early spring
Best Planting Time	March-November
Uses	Groundcover for mass plantings and gardens, or as a border plant
Position	Full sun to part shade Tolerates drought & cold
Soil Type	Sandy to well drained clay soils
Care	Prune if required or as desired
Where it Works	VIC, NSW, SA, WA, ACT & TAS; currently testing in QLD

Grey BoxTM

Westringia fruticosa 'WES04' (D

The compact, low-mounding, blue-grey foliage of this small native shrub makes a great addition to the available plant palette for rain gardens and bio-retention swales. Adds spectacular contrast to deep green plantings in the coastal landscape or inland. Evergreen and tidy even if left unpruned, it naturally maintains a much-desired bun shape. An easy care and hardy plant, tolerating periodic wet feet, salt spray, frost and drought.

NO FUSS A great substitute for English Box, drought and frost tolerant. **FUNCTIONAL** Useful for drainage and bio-retention swales, rain gardens,

hedging, borders, containers and mass planting.

RELIABLE Compact natural ball shape can be left unpruned or prune up

to 3 times a year for a more dense, tidy hedge.

OZBREED EXTRA Can tolerate periodic wet feet anticipated in drainage swales

and rain gardens. Suits a range of soil types from sandy to

heavy clay.

Description	Very compact native hedge plant
Density	3-6 plants per m ² 2-3 per linear metre
Height & Width	30-45cm x 30-45cm unpruned; 30cm x 30cm pruned
Flowering	White flowers from September-May
Best Planting Time	March-November
Uses	Rain gardens, bio-retention swales, hedges, borders, containers, mass plantings
Position	Full sun to light shade; Tolerates drought & frost
Soil Type	Most soil types
Care	Water as needed for 8–13 weeks until established; prune to desired shape as required 1–3 times a year after flowering
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

MundiTM

Westringia fruticosa 'WES05' (D

Tough, spilling Westringia groundcover with the unique ability to handle periodic wet feet, like Grey Box™ Westringia. Sports white spring flowers. The compact foliage growth will out-compete weeds. A naturally low mounding, low maintenance plant that looks good left unpruned, or adapts to architectural topiary clipping styles where desired.

NO FUSS Drought and cold hardy in soils ranging from sandy to silty

clay, including periodic wet feet. Natural rainfall is sufficient

irrigation after establishment.

FUNCTIONAL Low spreading groundcover perfect for bio-retention swales, rain gardens, rockeries, mass planted to spill over retaining

walls or hide unsightly, low-lying areas, roadsides and verge plantings while maintaining line of sight requirements.

RELIABLE Spread of up to 1.5m with greater density after regular

pruning.

5	- a 1 vc 1 a 1
Description	Tough, beautiful groundcover
Density	1-3 plants per m ²
	1–1.5 per linear metre
Height & Width	40-50cm x 1.5m
Flowering	White flowers from Sep-Apr
Best Planting Time	March-November
Uses	Great for mass plantings, bio-retention swales, rain gardens
	and low maintenance areas
Position	Full sun to part shade
	Tolerates drought & cold
Soil Type	Sandy to well drained clay soils
Care	Water as required for 8–13 weeks until established; almost
	no maintenance; prune to shape 1-3 times a year after
	flowering, every few years for a natural shape
Where it Works	VIC, QLD, NSW, TAS, SA, WA & ACT
	(Prefers shelter from heavy frost in ACT)

Ozbreed Aussie Box®

Westringia hybrid 'WES08' 🗇

A tough native alternative to English or Japanese Box, with compact leaf and natural ball-shaped habit that thrives in both inland and coastal climates. The masses of self-cleaning lilac flowers that cover the plant from spring through to autumn will attract pollinators to the garden. An easy-care plant that requires little attention, making it the perfect set and forget shrub for large-scale landscaping situations.

NO FUSS Drought and salt tolerant, suitable in a range of soil

types but won't tolerate wet feet.

FUNCTIONAL Low hedge, mounded plantings, borders, container

gardens, formal gardens with regular clipping and

topiary applications.

RELIABLE Fast to establish with low water requirements and

tolerant of frosts.

Description Native box hedge plant with a tight, compact growth habit

Density 2-4 plants per m²

1.5–3 per linear metre

Height & Width 40-60cm x 40-60cm pruned 70-95cm x 70-95cm unpruned

Flowering | Mauve flowers from Sep-May

Best Planting Time | March-November

Uses | Hedges, borders, containers and

mass plantings

Position Full sun to light shade

Tolerates drought & frost

Soil Type | Most soil types

are Prune to desired shape as required

Where it Works VIC, NSW, ACI,

VIC, NSW, ACT, TAS, SA, WA and South East QLD (not suited to Northern QLD)

$\overline{\mathbf{N}}$ aring \mathbf{a}^{TM}

Westringia hybrid 'WES01' (D

This fast-growing native shrub brings a tidy, mound-shaped form to the landscape. Festooned with lilac flowers from spring to autumn, it has great hedging applications thanks to its tight, compact foliage. Suited to natural, unpruned and informal uses, or clipped topiary and formal hedging in a more traditional landscape.

NO FUSS Its fastigiate habit results in half as much pruning than most other Westringia forms. Neat, naturally

dense growth.

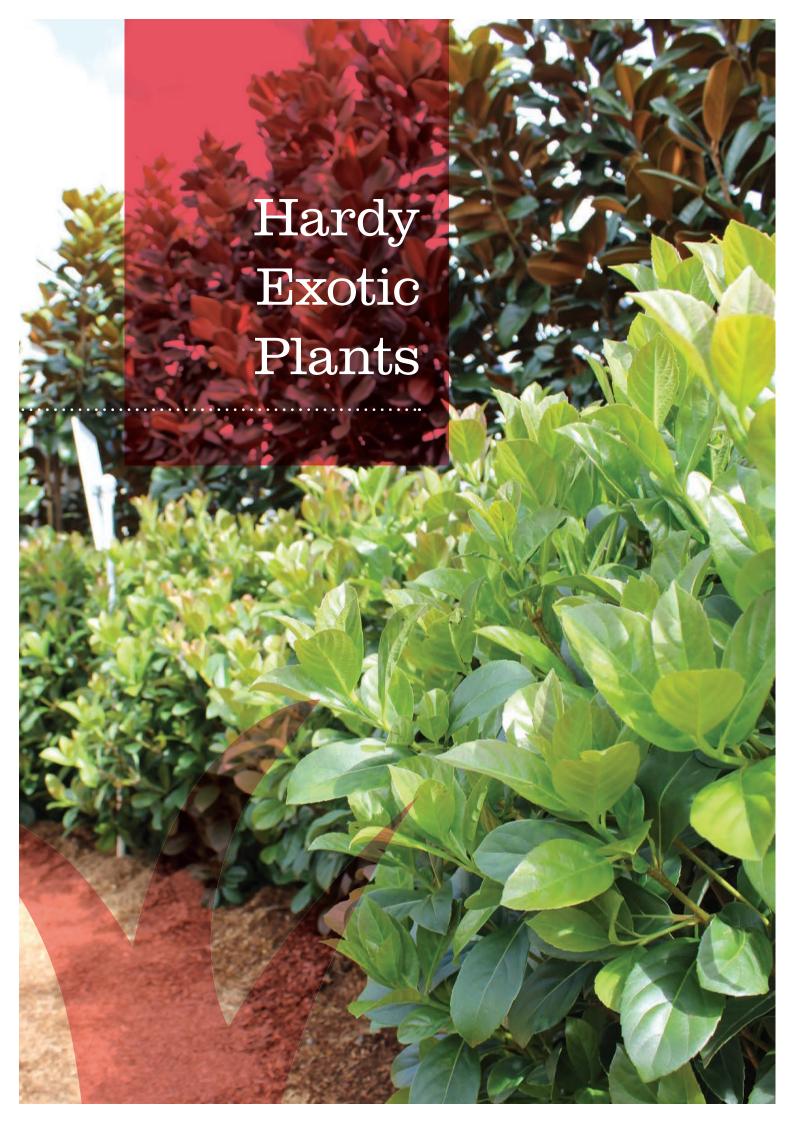

FUNCTIONAL Windbreak, hedge, screening, shrub layer, native and

coastal gardens and a pollinator-attracting feature.

RELIABLE Well suited to drought and drier climates and sandy

to well-drained clay. Doesn't like wet feet.

Description	The best hedging form of Westringia
Density	1–2 plants per m ² 1–2 per linear metre
Height & Width	1m x 60cm pruned; 2.2m x 1.5m unpruned
Flowering	Mauve flowers from Sep-May
Best Planting Time	March-November
Uses	Tidy hedging or specimen plant
Position	Full sun to part shade; drought & cold tolerant
Soil Type	Sandy to well drained clay soils
Care	Prune as required or leave unpruned
Where it Works	VIC, NSW, ACT, TAS, SA, WA and South East QLD (not suited to Northern QLD)

Flat MatTM

Trachelospermum asiaticum 'FT01' (1)

Star Jasmine is the go-to groundcover and climber in contemporary landscape architecture and design. Flat Mat™ Trachelospermum is the flattest Star Jasmine available to screen or form a verdant groundcover and suppress weeds in sunny or shaded, tight and difficult sites. The pretty white flower adds a recognisable scent to the beginning of the warmer seasons and its evergreen glossy foliage is as hardy as it is beautiful. As a groundcover or supported on the vertical plane, Flat Mat™ Trachelospermum requires less pruning to achieve thicker coverage and density, faster than the common form of Star Jasmine.

NO FUSS Less pruning required due to its extremely flat, prostrate habit

and compact foliage.

FUNCTIONAL Quick to form a thick groundcover, climb a trellis or cover

a wall using tensioned wire or pergola frame.

Great for planters.

RELIABLE Prune after flowering to trigger growth.

Description	Low growing groundcover or climber
Density	1–2 plants per m² 1–2 per linear metre
Height & Width	30-40cm x 3-4m
Flowering	Small white flowers in summer
Best Planting Time	All year round
Uses	Groundcover, climber, containers, borders
Position	Full sun to part shade; drought & cold tolerant
Soil Type	Most soil types
Care	Keep moist in dry weather; prune after flowering; slow release fertilise in spring
Where it Works	VIC, QLD, NSW, ACT, TAS, NT, SA & WA

Dense Fence_{TM}

The perfect low maintenance, evergreen hedge or privacy screen, with compact and fine red-tinged new foliage and scented white flowers in spring. Finer leaves, higher density, shorter inter-nodes and reddish new growth is what sets Dense Fence™ Viburnum apart from the common form. The vigorous growth of Dense Fence™ Viburnum and its need for little to no pruning, creates hedging privacy screens in a few years.

NO FUSS Naturally more compact than common Viburnums, Dense Fence™ Viburnum needs less pruning to maintain its form.

FUNCTIONAL Hedge or boundary planting, suited to feature planting in pots

or garden beds.

RELIABLE Hardy in cold, frosts and drought, low pest and disease

resistance.

Description	Dense screen; subtle red new growth
Density	1–2 plants per m² 1–2 per linear metre
Height & Width	2.5m x 2m (up to 3.5m if left unpruned)
Flowering	White flowers in spring
Best Planting Time	Spring and autumn
Uses	Screen, hedge, small feature tree & patio pot plant
Position	Full sun to part shade; cold tolerant
Soil Type	Most soil types, prefers well drained soil
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in early spring; prune as required
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Want to keep those nosy neighbours out? Dense Fence™ and Quick Fence™ are the perfect privacy screening plants.

Quick FenceTM

Viburnum odoratissimum 'VOQ1' PBR (

Block out the neighbours in no time with this fast growing, evergreen Viburnum. The ideal hedging plant with mid-green, large glossy leaves and an upright growth habit. The tight, bushy foliage results in a better hedging form, fast. Regular tip-pruning on the lateral face of the shrub encourages side growth and eventually a thicker hedge.

NO FUSS Tolerant of most soil types and light frost once established in

full sun to part shade.

FUNCTIONAL Narrow windbreak, hedge or screen to hide unsightly views.

RELIABLE Fast-growing, deliciously glossy hedge in 18 months, the white

flowers in late spring are followed by red fruit.

OZBREED EXTRA Can be pruned regularly to encourage lateral growth but not

mandatory to prune.

Description	Fast growing, mid-sized screening and hedging plant
Density	1 plant per 1–2 m² 1 plant per 1–2 linear metres
Height & Width	4m x 2.5m
Flowering	White flowers in late spring followed by small red fruit.
Best Planting Time	Autumn and spring
Uses	Screening and hedging plant
Position	Full sun to part shade; cold tolerant
Soil Type	Most soil types, but prefers well-drained soil
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in spring; tip prune to promote more lateral growth
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Choose your viburnum fence.

Fence in a hurry, Quick Fence™ (left) is 2 years younger than our easy care fence, Dense Fence™ (right).

Agapanthus hybrid 'ANDbin' (

More colour, more often. Bright and vibrant blue flowers are held high above lush strappy green foliage from spring. Repeat flowering throughout the year. Looks amazing mass planted, in commercial or residential landscapes or raised in planters or balcony potted gardens.

NO FUSS

Thrives in rich soil and tolerates poorer soils, this is a tough plant that's drought and frost hardy.

FUNCTIONAL

Mass planted, cottage garden styles, formal, border planting, potted feature in gardens and on patios.

RELIABLE The compact form has good disease resistance.

Description	Compact Agapanthus that repeat flowers
Density	4-6 plants per m ² 2-4 per linear metre
Height & Width	40cm x 60cm; 60-80cm high flowers
Flowering	En masse Oct-Nov; sporadically throughout the year (depending on location and growing conditions)
Best Planting Time	March-November
Uses	Garden beds, borders, patio pots and planter boxes
Position	Full sun to part shade; drought & frost tolerant
Soil Type	Most soil types, but thrives in rich soil
Care	Water as required for 8–13 weeks until established; plant in a well mulched garden (chunky mulch is recommended); if required use slow release fertiliser in spring (for best flower production); remove older leaves and spent flowers stems as required
Where it Works	VIC, South QLD, NSW, ACT, TAS, SA & WA

Queen MumTM

Agapanthus orientalis 'PMN06' (

The extra-large, bi-colour tubular flowers of Queen Mum™ Agapanthus are held regally high above the compact green strappy foliage at around 1.5m. Its white petal and blue throated bloom attract pollinators during summer in full sun to partial shade.

NO FUSS

Hardy and tough, tolerating frost, drought, disease and humidity, Queen Mum™ Agapanthus is well suited to a water-wise garden.

FUNCTIONAL

Mass planted, cottage garden styles, formal, border planting, potted feature planting on patios and

planter boxes.

RELIABLE

Much-loved, like her namesake, Queen Mum™ Agapanthus has reliably and successfully been used

in landscapes for over a decade.

Description	Extra large white and blue flower heads
Density	2-4 plants per m ² 1.5-3 per linear metre
Height & Width	1.5m x 1.2m
Flowering	White/blue flowers from Dec-Jan
Best Planting Time	March-November
Uses	Garden beds, borders, patio pots, and planter boxes
Position	Full sun to moderate shade; drought & frost tolerant
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; remove older leaves and spent flower heads as required
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Agapanthus hybrid 'AMPU001' (

Deep purple, tubular flowers are held high above lush strappy green foliage in spring, with repeat flowering through the season and sporadic flowering throughout the year. A low maintenance, elegant plant for mass planting, in ground or raised in planters.

NO FUSS Compact form with good disease resistance.

FUNCTIONAL Mass planted, cottage garden styles, formal,

border planting potted feature planting on patios in

pots and planter boxes.

RELIABLE Thrives in rich soil and tolerates poorer soils,

This is a tough plant that's drought and frost hardy.

Description Compact Agapanthus that repeat flowers 4-6 plants per m² 2-4 per linear metre
Height & Width 40cm x 50cm; 50-60cm high flowers
Flowering En masse Oct–Nov; sporadically throughout the year (depending on location and growing conditions)
Best Planting Time March-November
Uses Garden beds, borders, patio pots and planter boxes
Position Full sun to part shade; drought & frost tolerant
Soil Type Most soil types, but thrives in rich soil
Care Water as required for 8–13 weeks until established; plant in a well mulched garden (chunky mulch is recommended); if required use slow release fertiliser in spring (for best flower production); remove older leaves and spent flowers stems as required
Where it Works VIC, South QLD, NSW, ACT, TAS, SA & WA

More flowers, more often. Bright white, tubular blooms are held high above compact strappy green foliage starting in spring, with repeat flowering throughout the season and sporadic flowering during the year. Low maintenance with sophisticated looks when mass planted, in ground or raised in planters.

NO FUSS Thrives in rich soil and tolerates poorer soils, a tough plant that's drought and frost hardy.

Mass planted, cottage garden styles, formal, border **FUNCTIONAL** planting, potted feature in gardens and on patios.

Good disease resistance and low maintenance plant **RELIABLE**

in commercial or residential landscapes

in commercial of residential landscapes.

Cosmic WhiteTM

Rhaphiolepis indica 'RAPH01' (D

The dark, silky green foliage of this dependable shrub, boasts an extra-large white flower display in spring in all types of Australian climatic extremes. In shade, sun and poor soils, Cosmic White™ Rhaphiolepis has been bred to infrequently produce viable seed, making it a safer choice near bushland.

NO FUSS Covered in spring flowers. Highly disease resistant in

sun, shade, hot, dry, cold and frost.

FUNCTIONAL Hedging, perennial shrub layer, Mediterranean,

formal residential gardens, commercial designs.

RELIABLE Tough and dependable, this perennial garden bed

stalwart provides the backdrop tones to accent-plant

heroes.

Description Density 1–3 plants per m² 1–1.5 per linear metre Height & Width Flowering White flowers from Sep-Nov Best Planting Time Large, profusely flowering shrub 1–3 plants per m² 1–1.5 per linear metre 4.5–2m x 1.5m White flowers from Sep-Nov March-November
1–1.5 per linear metre Height & Width 1.5–2m x 1.5m Flowering White flowers from Sep–Nov
Flowering White flowers from Sep-Nov
Best Planting Time March-November
Uses Hardy shrub for just about any location; home and commercial use
Position Full sun to moderate shade Drought & cold tolerant
Soil Type Sandy to well drained clay soils
Care Water as required for 8–13 weeks until established; if required, prune every two years after flowering
Where it Works VIC, QLD, NSW, ACT, TAS, NT, SA & WA

Rhaphiolepis indica 'RAPH02' (D

The perennial deep green foliage blooms with contrasting large pink flowers in spring and summer. A low mounding shrub that provides foliage texture year-round. Tough enough to tolerate the extremes while looking poised and graceful positioned in full sun to light shade.

NO FUSS Cosmic Pink™ Raphiolepis thrives in difficult sites,

through seasonal humidity, drought and frosts

and in most soil types.

FUNCTIONAL Hedging, low shrub, mounded plantings, mixed

planting gardens, low irrigation landscapes and

coastal gardens.

RELIABLE Less weedy, rarely produces viable seed making it

a safer choice when planting near bushland.

O So $Fine^{TM}$

Gardenia augusta 'KENO4' 🗇

Groundcover, dwarf Gardenia with finer leaf and soft appearance. Smothered in richly scented white flowers during spring, O So Fine™ Gardenia performs well as a weed suppressant and living mulch with the added benefit of looking and smelling lush and luxurious. Prefers moist, well-drained soil in garden beds or planters.

NO FUSS Fertilise annually and water for best performance in

prolonged drought.

FUNCTIONAL Border planting, containers, groundcover.

RELIABLE

Brings the much-desired Gardenia fragrance to a scented garden in spring. Needs protection from

heavy frosts.

Description	Fine leaf dwarf Gardenia; lots of white flowers
Density	1–3 plants per m² 1.5–3 per linear metre
Height & Width	Approx. 30cm x 1m
Flowering	White flowers in late spring; spot flowering in warmer months
Best Planting Time	March-October
Uses	Groundcover, border plant, containers
Position	Full sun to part shade; drought tolerant
Soil Type	Well drained moist soils
Care	Water as required for 8–13 weeks until established; keep moist in dry weather, protect from heavy frost; trim 1–2 times a year
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Little PhilTM

Philodendron species 'PHILO1' (

Compact Philodendron suited to vertical gardens and the low light available indoors. Outside, it does well in over-shadowed areas or south facing green walls. Bred for shade, will brighten darker garden zones with its light emerald green foliage.

Lush year-round and vigorous horizontal spread NO FUSS

in the warmer months, complements more showy selections in a design. No apparent aerial shoots, so doesn't 'reach' vertically like other Philodendrons.

FUNCTIONAL Green walls, deep shade or shelter in cooler climates.

Indoors, it makes the ideal office-desk plant.

RELIABLE Shade-loving, leaves won't elongate like other

Philodendron forms, maintaining its' compact height.

Description	Compact clumping plant
Density	3–9 plants per m² 2–4 per linear metre
Height & Width	35cm x 35cm
Flowering	N/A
Best Planting Time	Spring and autumn
Uses	Landscape gardens, indoor plant, green walls
Position	Light shade to moderately heavy shade; drought & cold tolerant
Soil Type	Reasonably drained soil with some organics
Care	Water as required for 8–13 weeks until established; remove older leaves if it becomes necessary; use slow release fertiliser in spring if required
Where It Works	VIC, QLD, NSW, NT, SA & WA

Double GoldTM

Gazania hybrid 'GT20' (

Glaucous blue-grey foliage and bright yellow, double flowers throughout most of the year. Established Double Gold™ Gazanias ground-hugging tendencies make it perfect for soil stabilisation and weed suppression. A sterile groundcover, with great drought and frost tolerance.

NO FUSS Requires little maintenance and thrives in poor soil

once established.

FUNCTIONAL Verges, sloping sites and embankments, erosion

control and soil stabilisation.

RELIABLE Fast to establish with twice the flower count than

common Gazanias.

Description	Spreading groundcover with double the flowers
Density	3-5 plants per m ² 2-4 per linear metre
Height & Width	Approx 20cm x 60cm
Flowering	Yellow flowers from Sep-Apr
Best Planting Time	March-November
Uses	Mass planting, rockeries, roadsides
Position	Full sun; drought & frost tolerant
Soil Type	Free draining to heavy clay soils
Care	Water as required for 8–13 weeks until established; little care needed; trim as required after flowering
Where it Works	VIC, NSW, TAS, SA, WA & QLD (not suited to northern QLD)

Purple PixieTM

Loropetalum chinense 'PEACK' (D

This Loropetalum brings year-round, rich purple foliage colour contrast to clumped or mixed plantings. The weeping habit and dwarf form adds interest to surrounding border plantings in full sun to part shade, in ground or in raised beds. Establishment management plan should include a regular irrigation program.

NO FUSS Prune biannually after flowering to keep it shapely

and low at 30cm.

FUNCTIONAL Excellent, year-round foliage colour contrast in

mixed planting designs in residential or commercial gardens, in planters, contemporary mixed species

raised garden beds

RELIABLE Loves slightly sheltered positions. The spilling habit is

accentuated by bright pink fringe flowers in spring.

Description	Purple dwarf, weeping groundcover
Density	2-3 plants per m² 2-3 per linear metre
Height & Width	30-50cm x 1.2-1.5m
Flowering	Pink flowers late winter/early spring
Best Planting Time	March-November
Uses	Colour contrast for garden beds and containers
Position	Full sun to part shade; cold tolerant
Soil Type	Well drained soils with adequate moisture
Care	Water as required for 8–13 weeks until established; use slow release fertiliser in early spring; prune very 3–4 years to keep below 30cm (prune more frequently if required)
Where it Works	VIC, QLD, NSW, ACT, TAS, SA & WA

Sweet PrivacyTM

RELIABLE

Murraya paniculata 'MP01' (

A dense screening hedge adorned with beautiful, white fragrant flowers from spring to autumn. Lower maintenance than regular Murraya form and just as reliable planted as a tidy hedge that is neither too big or too small. In full sun to part shade and in most soil types, hide unsightly views with this perfect Murraya.

NO FUSS A drought hardy, long-lived tough shrub that is

naturally compact and bun-shaped.

FUNCTIONAL Screening, privacy hedge, perennial evergreen shrub

layer, pollinator attracting or specimen plant.

Prune for preference. Looks good when its natural bun-shape is enhanced, or in more formal, clipped styles. Regular pruning will result in a tighter, more

dense growth habit.

_	
Description	Screening hedge, less pruning than the common form
Density	1 per m² 1-2 per linear metre
Height & Width	1.8-2.5m x 1.5m
Flowering	White, sweet smelling flowers in spring and late summer – early autumn
Best Planting Time	September-May
Uses	Screening, hedging, specimen shrub
Position	Full sun to part shade.
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; use slow release fertiliser yearly; prune twice per year, or up to 3 times a year for very tight hedging

Thin RedTM

Photinia x fraseri 'NP01' (

Perfect small footprint hedging plant for narrow garden beds and shrinking backyards that still allows full use of the garden for recreation. Small white flowers bloom in mid to late spring while new growth appears in flushes of red.

NO FUSS Full sun to part shade and successful in most

soil types.

FUNCTIONAL Narrow hedge or privacy screen, requiring an annual

prune to encourage growth or more regular pruning

for a more formal finish.

Where It Works VIC, QLD, NSW, NT, SA & WA

RELIABLE Prune regularly to maintain hedge height at desired

level when mature.

Description	Narrow hedging plant with red new growth
Density	1 per m ² 2 per linear metre for screening
Height & Width	3-4m x 60cm
Flowering	Small white flowers in mid to late spring
Best Planting Time	March-November
Uses	Screens, hedges for narrow spaces
Position	Full sun to part shade; frost tolerant
Soil Type	Most soil types
Care	Water as required for 8–13 weeks until established; use slow release fertiliser annually; prune 1–2 times a year
Where It Works	VIC, South QLD, NSW, ACT, TAS, SA & WA

Nandina Range

This rich burgundy-red, fine foliaged, small shrub brings contrast and texture to the landscape. Native to Japan, the lance-shaped leaf lends it a bamboo-like texture, in miniature form.

Our Nandina range has every landscape covered; at ground level Flirt™ Nandina is the perfect choice, its new red growth lights up with masses of brightly coloured foliage, almost year-round. Slightly more statuesque, Obsession™ and Blush™ Nandinas reach small shrub heights, approximately 70cm tall. Clearly define areas in a landscape, delineate a border or low mounding hedge and bring colour to the garden. Shapely with little maintenance, they appear soft and fine while being so tough and hardy, they look great in the most difficult of sites. Popular in children's gardens for their happy, vibrant scarlet colouring and resilience to harsh climates (or treatment from the playground users!)

Nandina domestica 'AKA' /b

So called for its production of intense red foliage for nine months of the year, Blush™ Nandina is the perfect medium shrub for defining borders or a low hedge, forming a natural tight ball shape with little or no pruning.

NO FUSS Tolerates all soils from clay to free draining, frost and

drought tolerant.

FUNCTIONAL Low hedge, mounded shrubs, flat groundcover or

accent plant in parks, residential or commercial

designs.

RELIABLE Sterile, making it a good choice near bushland.

Description	Red flushing small shrub
Density	3–6 plants per m ² 2–3 per linear metre
	2-3 per illiear metre
Height & Width	60-70cm x 60-70cm
Flowering	N/A
Best Planting Time	March-November
Uses	Low hedge, shrub, feature
Position	Full sun to moderate shade; drought & cold tolerant
Soil Type	Free draining to heavy clay soils
Care	Water as required until established; use slow release fertiliser in spring if required; leave unpruned or prune to shape every 3 years
Where it Works	VIC, QLD, NSW, ACT, TAS, NT, SA & WA

Nandina domestica 'MURASAKI' (D

Flirt™ Nandina is the only low-growing groundcover form that is covered in red hues in spring, summer, autumn and winter in the right climate zone. Tough in drought and frost conditions, this low growing and spreading Nandina won't self-propagate from seed, making it a safer choice around bushland.

NO FUSS In full sun or part shade and most soil types,

 $\mathsf{Flirt}^{\mathsf{TM}}$ Nandina brings its best to every landscape.

FUNCTIONAL Groundcover, low hedge, mounded clumps or low

accent planting or feature in parks, streetscapes,

commercial or residential designs.

RELIABLE Covered in red new growth for most of the year.

Description	Red flushing groundcover
Description	rica mashing groundoover
Density	4–6 plants per m ²
	2–4 per linear metre
Height & Width	30-40cm x 40-50cm
Flowering	White flowers in spring
Best Planting Time	March-November
Uses	Groundcover, low hedge, feature
Position	Full sun to moderate shade;
	drought & cold tolerant
Soil Type	Free draining to heavy clay soils
Care	Water as required for 8-13 weeks until
	established; prune every 3-4 years if required;
	use a slow release fertiliser in spring
Where it Works	VIC, QLD, NSW, ACT, TAS, NT, SA & WA

ObsessionTM

The bright red of Obsession™ Nandina's new growth adorns this tidy shrub, almost year-round, providing interest throughout the seasons.

NO FUSS Maintains a dense upright habit with no spreading as it ages.

Prune every 2-3 years if desired.

Low hedge, mounded clumps, accent planting or feature in **FUNCTIONAL**

streetscapes, park and residential planting.

RELIABLE The cultivar name, Seika means 'Sacred Fire' in Japanese,

so called because of its flamboyant red new-growth, almost

year-round.

OZBREED EXTRA Obsession™ Nandina is a greatly improved selection of the popular Nandina 'Gulf Stream'. Where the new growth of 'Gulf Stream' is rust-coloured, Obsession™ Nandina's is bright red.

Description	Red flushing dwarf Nandina
Density	3–6 plants per m ² 2–3 per linear metre
Height & Width	60-70cm x 60-70cm
Flowering	N/A
Best Planting Time	March-November
Uses	Low hedge, shrub, feature
Position	Full sun to moderate shade; Drought & cold tolerant
Soil Type	Well drained soil
Care	Water as required for 8–13 weeks until established; prune every 2–3 years if required
Where it Works	VIC, QLD, NSW, ACT, TAS, NT, SA & WA

Hardy Aloes

Our Aloes bring an architectural, contemporary look to the landscape and brighten the winter season with their iconic flowers.

The popularity of succulents in the Australian landscape is soaring, due to their durability, resistance to heat and striking architectural forms. The rosette-shaped, self-cleaning foliage looks great year-round, mass planted or used as a feature in pots and in mixed plantings. Their bird attracting flower spikes cover the plants in autumn and winter, brightening up the landscape in the cooler seasons. Where soil depth or water availability is low, Aloes come into their own, thriving on little maintenance. Hardy enough to withstand roadside and street planting, their compact mature height makes them perfect when maintaining low line of sight requirements.

NO FUSS

Ozbreed Aloes require far less water during establishment phase, perfect where sites are difficult to irrigate when installing. Low maintenance in full sun to part shade and suited to most soil types – however mound or condition soil if planting into heavy clay.

FUNCTIONAL RELIABLE

Mass planted, borders, specimen or accent plant, mixed planting and in pots.

Cooler season flowering introduces golden sunset hues that contrast against the striking textured greens of the Aloe foliage. Drought and frost tolerant.

Description	Compact, tight and dense Aloe
Density	6-12 plants per m ² 3-6 per linear metre
Height & Width	30cm x 30cm; 50cm high flowers
Flowering	Orange flowers in winter and spring
Best Planting Time	March-November
Uses	Mass planting, garden borders, specimen plantings
Position	Full sun to part shade; frost, heat and drought tolerant
Soil Type	Most soil types
Care	Water as needed for 8–13 weeks until established; cut back every 4–5 yrs if required; fertilise with slow release fertiliser yearly
Where it Works	VIC, NSW, ACT, TAS, SA, WA & QLD (not suited to Nth QLD)

The dense, tight, blue-green foliage of Sea Urchin™ Aloe is more compact than its common Aloe form. Its prolific orange flowers in later winter and into spring contrast with the self-cleaning, blue-green foliage. Happy in most soil types but in humid weather Sea Urchin™ Aloe needs free draining soils to avoid rot and disease. Will thrive in full sun to part shade.

Description	Semi-compact Aloe
Density	3–6 per m² 2–4 per linear metre
Height & Width	35 cm x 40cm foliage; 60cm high flowers
Flowering	Orange and cream flowers in early-mid winter
Best Planting Time	March-November
Uses	Mass planting, borders, feature plant
Position	Full sun to part shade
Soil Type	Most soil types, but if in clay soils, try to improve drainage or use in raised garden
Care	Water as required for 8–13 weeks until established; fertilise yearly with slow release fertiliser, cut back spent flowers if desired
Where It Works	VIC, South QLD (raised gardens and free draining soil), NSW, TAS, SA, WA & ACT (requires further testing here)

Mighty Coral[™] Aloe's pale orange and cream flowers give it a coral pink hue at a distance. Flowering from early to mid-winter on a multitude of stems that reach high above the foliage, the many flower blooms retain their colour and shape for an extended period. A clumping Aloe form and semi-compact in stature to 35cms, tolerant of drought and frost.

Description	Compact, tough Aloe	
Density	4-8 per m ² 3-6 per linear metre	
Height & Width	25 cm x 35 cm foliage; 55cm high flowers	
Flowering	Gold flowers in cooler months	
Best Planting Time	March-November	
Uses	Mass planting, border and specimen plantings	
Position	Full sun to part shade	
Soil Type	Most soil types, but if in clay soils, try to improve drainage or use in raised garden	
Care	Water as required for 8–13 weeks until established; fertilise yearly with slow release fertiliser, cut back spent flowers if desired	
Where It Works	VIC, South QLD (raised gardens and free draining soil), NSW, TAS, SA, WA & ACT (requires further testing here)	

The golden yellow flowering blooms that give Mighty GoldTM Aloe its name appear during winter and pick up the golden-orange tones in the spiky margin of the foliage. Iconic spots on the leaf help to maintain interest throughout the rest of the year. A compact and tough succulent that makes a statement when mass planted in beds or decorative pots to create an accent or focus. An Aloe that will handle short periods of wet feet, as well as drought.

For regular jobs, the classic 140mm pot is commonly specified and for good reason. It hits the sweet spot of a decent sized young plant, with immediate visual impact at a reasonable price. And as you'd expect the bulk of our plants are grown and sold at this size. However, when budgets are stretched then it's time to turn to tubestock. Far from being the poor cousin to 140mm pots, tubestock actually have lots of winning characteristics. These include:

- Extremely cost effective so impossibly tight budgets can be met. This is especially
 the case for mass plantings, long borders and roadside zones.
- Significantly more plants can be installed in the design, reducing or eliminating large
 unsightly gaps. Remember, the cost of a 140mm pot is usually the same as three
 tubes*, so that's three times as many plants going in the ground.
- Plants can be installed closer together to help outcompete weeds faster. This will help keep the site looking good as it grows out with less ongoing maintenance required.
- Their small size makes tubestock much easier to handle and faster to plant.
 This leads to significant savings in labour costs due to quicker planting out times.

A broad range of plants perform extremely well when planted out as tubestock including tree seedlings, grasses, strappy leaf plants, groundcovers and many shrubs. In fact, our catalogue is full of great plants available in this size which means your designs don't need to be restricted just because you choose tubestock. Plus, the growth rate of tubestock is fast with these young, vigorous plants usually catching up to a 140mm pot in size within 12 months of planting.

Extensive long-term trialling of all our plants also means we know how they perform in various situations. This is the valuable information we provide in each plant profile to set your designs up for success. Ultimately choosing reliable plants is far more important than the size of the pot.

Quality Without Compromise

The secret to Ozbreed's cost effective tubes is in the growing. Regular growing methods involve a two-step process of growing in plug trays first and then potting into tubes. Naturally, this requires extra resources, labour and time, all of which adds to the final cost.

Our one-step system enables Ozbreed licensed growers to take splits or cuttings and grow them directly in the tubes. These are then sold as high quality, ready to plant tubestock. This direct tube growing method is obviously smarter and more cost-effective. It enables great quality tubestock to be grown and sold at a more budget-friendly price.

Without compromising your design and in order to avoid the substitution of reliable, functional plants that you can trust, respecify Ozbreed tubestock if the 140mm pot becomes an unviable budget option.

Remember that when it comes to jobs with real budget constraints, you can count on Ozbreed tubestock to deliver those cost savings options without compromising the landscape's long-term success.

Our plants are grown to perfection by our licensed growers and trialled constantly so we know how they perform in your region.

Top 10 Plants

for Mass Planting, Shade, Greenwalls & Erosion

Top 10 Mass Planting Plants

The following ten plants have proven over time to handle the tough conditions of low maintenance mass plantings. There is a wide variety of shrubs, groundcovers and strappy leaf plants in this selection that are drought tolerant, cold hardy and look great planted en masse.

Grey Box™ Westringia fruticosa 'WES04' (b)	Compact ball shape; partially wet or dry	Page 49
Mundi™ Westringia fruticosa 'WES05' (b	Groundcover, small white flowers	Page 50
Tanika [®] Lomandra longifolia 'LM300' (l)	Improved, compact, fine leaf form	Page 15
Shara [™] Lomandra fluviatilis 'ABU7' (b	Fine leaf, compact; partially wet or dry	Page 13
Little Jess [™] Dianella caerulea 'DCMP01' (b)	Compact, dwarf Flax Lily	Page 9
Cassa Blue® Dianella caerulea 'DBB03' (b)	Clumping, compact rich blue foliage	Page 8
Tasred® Dianella tasmanica 'TR20' (b)	Contrasting green and red toned foliage	Page 16
Nyalla® Lomandra longifolia 'LM400' (i)	Semi-compact blue-grey fine leaf	Page 14
Aussie Rambler™ Carpobrotus glaucescens 'CAR10' (b)	Spreading groundcover; large flowers	Page 36
Green John™ Callistemon viminalis 'LJ23' (b)	Compact Callistemon with green foliage	Page 42

Top 10 **Shade Plants**

Shade trials conducted by Ozbreed and cross referenced with real world evidence that specifies plants that can survive in deep shade, determined this list of plants. Ozbreed trials found the number of plants that flourished at two different shade levels, diminished as they were plunged deeper into darkness. This is the refined list of plants that will succeed in the growing conditions found between two buildings, usually defined as heavy shade.

Just Right® Liriope muscari 'LIRJ' (1)	Evergreen, clean growing Liriope	Page 23
Little Phil™ Philodendron species 'PHIL01' ⟨b)	Compact clumping plant	Page 59
Isabella® Liriope muscari 'LIRF' (b	Fine leaf, compact, spreading Liriope	Page 22

Silverlawn [™] Liriope muscari 'LIRSS' (b)	Low growing, variegated; looks silver from a distance	Page 21
Shadow Star™ Libertia paniculata 'LPP01' (h)	Wider weeping foliage, clean white flowers	Page 20
Tropic Cascade™ Lomandra hystrix 'LHWP' (b)	Lomandra hystrix with weeping foliage	Page 16
Katie Belles [™] Lomandra hystrix 'LHBYF' (l)	Full sized Lomandra hystrix; mass flowering	Page 10
Emerald Arch® Dianella tasmanica 'DT23' (b)	Flax Lily with broad arching leaves	Page 21
Tasred® Dianella tasmanica 'TR20' (l)	Contrasting green and red toned foliage	Page 16

Top 10 Greenwall Plants

Often greenwalls are subject to excessive irrigation and are too wet. Most of the plants in this list handle periodic wet feet, which provide the buffer needed for plants to survive in a greenwall situation, rather than rot out due to over-irrigation. Over trials conducted in two sites, our findings concluded that the water availability of a greenwall varies over the total area, with more water collecting towards the bottom of the structure. Hence, plants that are more drought tolerant should always be situated at the top of the greenwall, while those that prefer wet feet, are placed closer to the bottom. Likewise, plants that can tolerate being in shade should be planted below those that need full sun, allowing for plant growth and subsequent shading, as they settle in and establish.

Fine leaf, compact; partially wet or dry	Page 13
Improved, compact, fine leaf form	Page 15

Top 10 Erosion Control Plants

To arrive at this Top 10 list, we took 31 plants that are commonly relied on in erosion control situations into a trial. We tested their erosion control capabilities through their root and rhizome growth, in a controlled environment when compared to unvegetated soil mix. When the trial plants were tested with a shear vane tester against the unvegetated samples, they qualified if there was an increase of at least 95% in shear strength compared to the unvegetated samples, when analysed using an ANOVA test.

King Alfred® Dianella, an improved variety of Dianella Caerulea was most notable in its soil strengthening capacity, taking the top ranking. King Alfred Dianella returned a result that improved the holding capacity of the soil 752% due to its vigorous rhizome activity and root growth. It returned an undrained shear strength of 70 kPa, compared to unvegetated soil with a shear strength of 9 kPa. Many other varieties also strengthened the soil in our tests and make up the remainder of our Top 10.

King Alfred® Dianella caerulea 'JOHN316' (b)	Dense, compact blue-green foliage	Page 12
Nafray® Pennisetum alopecuroides 'PA300' (b	Compact, clumping native grass	Page 26
Katrinus Deluxe Lomandra longifolia 'Katrinus Deluxe' (D	Improved semi-compact fine leaf form	Page 7

Tanika [®] Lomandra longifolia 'LM300' (b	Improved, compact, fine leaf form	Page 15

Top 10 Greenroof Plants

The tough, exposed environment of a rooftop garden requires equally hardy plants that will thrive and add to the overall aesthetic. A range of plant types offers the buildings residents and visitors interest, contrast and diversity, all of which contribute to make a more interesting design. Ozbreed natives that have been trialled and tested on roadside plantings translate well to a podium or rooftop site where maintenance is less regular and exposure to the elements can be brutal.

The components of the soil substrate that they are planted into is as important as the plant selection itself. In rooftop trials at the University of Western Sydney, where organic matter was introduced to the substrate in a ratio of up to 50:50 rooftop mineral mix, the trial plants did much better. The wellcomposted organic matter didn't slump over time as the healthy, fibrous roots of the selected plants established, grew and filled out in the soil.

Shara [™] Lomandra fluviatilis 'ABU7' (b)	Fine leaf, compact; partially wet or dry	Page 13
Mundi™ Westringia fruticosa 'WES05' (b	Groundcover, small white flowers	Page 50

Top 10 Rain Garden Plants

Rain gardens help to remove excessive nutrients from water while slowing runoff before entering our waterways, reducing erosion and pollution. Rain gardens catch water from roads, roofs and other hard surfaces and filter water through layers of plant roots, sand and gravel before it travels into the storm water system. Our Top 10 is based on the best plants that maintained a healthy appearance and required little maintenance while exposed to pollution in the rain garden environment.

Shara [™] Lomandra fluviatilis 'ABU7' (b)	Fine leaf, compact; partially wet or dry	Page 13
Katie Belles [™] Lomandra hystrix 'LHBYF' (b)	Full sized <i>Lomandra hystrix</i> ; mass flowering	Page 10
Tropic Cascade™ Lomandra hystrix 'LHWP' (b	Lomandra hystrix with weeping foliage	Page 16

Cosmic Pink™ Rhaphiolepis indica 'RAPH02' (b	Large flowers, tough compact form	Page 58
Macarthur™ Callistemon viminalis 'LC01' (b)	More compact, better flower Callistemon; bushy growth habit	Page 42
Lucky Stripe [™] Lomandra hystrix 'LMV200' (b	Green / white variegated foliage	Page 14
Mundi [™] Westringia fruticosa 'WES05' (t)	Tough, beautiful ground cover	Page 50
Grey Box™ Westringia fruticosa 'WES04' (b)	Compact ball shape; partially wet or dry	Page 49
Just Right® Liriope muscari 'LIRJ' (l)	Evergreen, clean growing Liriope	Page 23

Top 10 Fire Retardant Plants

Any plant will burn when exposed to the extreme heat associated with bushfire, but some may take longer to ignite. These Top 10 plants are recommended based on a CSIRO study specifically and industry articles

Although plant selection alone will not stop bushfire threat, the premise of the CSIRO study is that some live plants take longer to ignite when exposed to heat than others. Plants that are live and well maintained, take longer to ignite, than the same plant's dried or dead foliage when exposed to heat in the experiment.

Tanika [®] Lomandra longifolia 'LM300' (b	Improved, compact, fine leaf form	Page 15
Nyalla [®] Lomandra longifolia 'LM400' (l)	Semi-compact blue-grey fine leaf	Page 14

Mighty Gold™ Aloe hybrid 'AL02' ⟨b	Compact, tough Aloe	Page 66

Top 10 Salt Tolerant Plants

We wanted to recreate an experiment which simulated the impacts of salt on Ozbreed plants recommended for coastal sites or those watered by bore-water with a high salinity level. The initial selection was chosen based on common knowledge of second-line, or front-line salt tolerant plants. We arrived at our Top 10 after 4 months of rigorous testing.

To simulate bore water or salt laden winds that might affect second-line salt tolerant plants, we applied a 60% strength sea water to them at regular intervals. For front-line salt tolerant plants that should handle coastal positions, we applied a 90% strength sea water at regular intervals. After a period of 4 months and the collected data based on the damage those salt-water applications caused the plants, we arrived at the list below.

Nyalla [®] Lomandra longifolia 'LM400' (b	Semi-compact blue-grey fine leaf	Page 14
Cosmic White [™] Raphiolepis indica 'RAPH01' (b)	Tough Raphiolepis; large white flowers	Page 58
Cosmic Pink [™] Raphiolepis indica 'RAPH02' (b	Tough Raphiolepis; large pink flowers	Page 58
