

Little Phil™

Philodendron species 'PHILO1' ♂

HARDY EXOTIC PLANTS

A new distinct compact form of the widely used *Philodendron*.

- This plant is far more compact than others, giving it some great advantages. Although small, it is quite vigorous in the warmer months.
- It is better in low light levels than other *Philodendrons*, as its leaves elongate less and it stays more compact.
- Little Phil™ *Philodendron* also spreads well.
- This plant does not appear to have aerial shoots like some types.
- It copes with light to moderately heavy shade. It can survive in full sun, but like all *Philodendrons*, it appreciates at least a little shelter from the full Australian sun. In the colder parts of Australia it's best grown as an indoor or patio plant, or in a well sheltered garden.
- All this makes it a great choice for general shade landscape gardens. For green walls, its habit makes it the perfect shade vertical garden plant. As an indoor plant it performs and looks amazing.
- The more compact, non elongating form of Little Phil™ *Philodendron* allows it to handle more shade than other *Philodendron*.
- Its size makes it the perfect table, bench top or window sill indoor plant. The perfect plant for the table on a patio. A great office desk companion plant.
- So whether it's landscape or indoors, the Little Phil™ plant will change the world of *Philodendrons* forever.

Little Phil™ (right) is more compact than Xanadu (left)

Description	Compact clumping plant
Density	3–9 plants per m ² 2–4 per linear metre
Height & Width	35cm x 35cm
Flowering	N/A
Best Planting Time	Spring and autumn
Uses	Landscape gardens, indoor plant, green walls
Position	Light shade to moderately heavy shade; drought & cold tolerant
Soil Type	Reasonably drained soil with some organics
Care	Water as required for 8–13 weeks until established; remove older leaves if it becomes necessary; use slow release fertiliser in spring if required
Where it Works	QLD, NSW, VIC, NT, SA & WA
