

Nafray®

Pennisetum alopecuroides 'PA300' (L)

NATIVE GRASSES

Nafray® *Pennisetum* is a tougher, more compact variety of native *Pennisetum*.

- A fine textured native grass that is more drought tolerant and has better winter colour than the common form. A proven performer for 10 years.
- Nafray® *Pennisetum* is a non-invasive native with a low viability of seed, making it the safe choice.

Description	Compact, clumping native grass
Density	4-10 plants per m ² 2-3 per linear metre
Height & Width	60cm x 60cm
Flowering	February-May
Best Planting Time	March-October
Uses	Mass planting for borders, rockeries and roadsides
Position	Full sun to part shade Tolerates frost & drought
Soil Type	Sandy to heavy clay soils
Care	Water as required for 8-13 weeks until established; trim 1/3 the size annually in May-Aug or as required; mulch well; use slow release fertiliser in late winter
Where it Works	NSW, ACT, QLD, VIC, SA, WA & TAS

Pennisetum alopecuroides *Pennisetum setaceum*

NOTE: Do not get this native Australian *Pennisetum alopecuroides* confused with the invasive African variety (*P. setaceum*). The native Australian varieties have a much wider plume than the exotic variety, and are non-invasive making them a safer choice. In ideal conditions this variety has the possibility to regenerate from seed (e.g. Northern NSW/QLD in warm/wet winters, wet areas and excessively irrigated gardens). It is not an invasive weed, however if you experience these conditions and prefer to avoid regeneration, remove spent flower heads as required and dispose of correctly.
