

A blue foliage Lomandra with good landscape performance unlike other Lomandra confertifolia

- Pacific Sky™ Lomandra is a dense, ground hugging form making it excellent for mass planting.
- It has beautiful blue arching foliage and produces masses of perfumed yellow flowers in spring.
- It is an excellent choice for difficult dry spots under trees. Our trials have shown that it also handles full sun and heavy soils better than other Lomandra confertifolia.

Description	Dense, ground hugging, blue foliage Lomandra confertifolia
Density	2-5 plants per m² 1-2 per linear metre
Height & Width	50-70cm x 60-90cm (up to 1.2m W at maturity)
Flowering	Perfumed yellow flowers Sept - Nov
Best Planting Time	Mar-Nov
Uses	Border edging, mass planting, accent planting near rockeries, difficult dry spots under trees
Position	Full sun to heavy shade; drought & frost tolerant
Soil Type	Wide variety of soils, sand to heavy clay, avoid wet feet
Care	Water as required until established; if needed cut back 15cm above the ground every 3-5 yrs if required
Where it Works	Central NSW, South NSW, VIC, SA & WA (further testing required for other regions)
