

Savanna Blue™

Lomandra filiformis 'LMF500' (b)

STRAPPY LEAF PLANTS

This small *Lomandra* has superb blue contrasting foliage and a nice texture.

- Savanna Blue™ *Lomandra* is a winner with its low height, excellent drought tolerance and the fact that it rarely, if ever, needs trimming.
- It is ideal as a border or ground cover for smaller, modern gardens.
- It has performed better than blue foliage *Lomandra confertifolia* types (particularly in the recent wet).
